KUNTZ FORESTRY CONSULTING INC. Project P4744

## 1.0 Introduction

Kuntz Forestry Consulting Inc. was retained by DTAH to complete a Tree Inventory and Preservation Plan for the properties located at 340 Burnhamthorpe Road East and 3437 Trafalgar Road in Oakville, Ontario. The subject properties are located on the southeast corner of Burnhamthorpe Road East and Trafalgar Road, within a rural area.

The work plan for this tree preservation study included the following:

- Prepare an inventory of tree resources greater than 10cm DBH on and within six metres of the subject property;
- Evaluate potential tree saving opportunities based on the proposed work plans, and;
- Document the findings in a Tree Inventory and Preservation Plan.

The results of the evaluation are provided below.

## 2.0 Methodology

### 2.1 Tree Inventory

The tree inventory occurred on 18 and 19 September 2025. Trees greater than 10cm DBH on and within six metres of the subject properties were included in the inventory. Tree locations were located using a topographic survey and a handheld GPS unit (Trimble GeoExplorer® 6000 series) accurate to  $\pm 1$ m. Trees on the subject properties and town's street trees that can be tagged were tagged with numbers 301-488, 701-1000, and 1501-1679. Butternut trees were not tagged and identified as BN1-BN6. Trees on the adjacent properties were not tagged and identified as A-Z, and AA-AN. A group of trees smaller than 10cm DBH located within the town road right-of-way were tallied as a polygon P1.

Individual tree resources were assessed utilizing the following parameters:

**Tree #** – Number assigned to trees that corresponds to Figures 1-5.

**Species** – Common and botanical names provided in the inventory table.

**DBH** – Diameter (cm) at breast height, measured at 1.4m above the ground.

**Condition** – Condition of tree considering trunk integrity (TI), crown structure (CS) and crown vigor (CV). Condition ratings include poor (P), fair (F), and good (G).

**Crown Dieback** – Percentage of dead branches within the crown.

**Dripline** – Crown radius (m).

**Comments** – Any other relevant tree condition information.

Refer to Table 1 for the detailed tree inventory and Figures 1-5 for the locations of the trees and polygons.

### 2.2 Tree Valuation

A valuation was calculated for trees located within the road right-of-way. The value was calculated using the Trunk Formula Technique. This method is described in the Guide for Plant Appraisal, 10<sup>th</sup> Edition (CTLA 2018). The Ontario Supplement (2021) provides regionally relevant data pertaining to species-specific basic costs for trees.

### Trunk Formula Technique

This method is used for trees that are larger than what is commonly available for transplant from a nursery. The Unit Tree Cost of the replacement tree is derived from a survey of nurseries or supplied by the Regional Plant Appraisal Council and published within the Ontario Supplement (2021). For Ontario, the species-specific Unit Tree Costs have been calculated within the Ontario Supplement (2021) and these Unit Tree Costs have been used for the calculation. Where a Unit Tree Cost was not specified by the Ontario Supplement for a species, a generic Unit Tree Cost of \$6.51 was assigned.

The Basic Tree Cost is calculated by multiplying the Unit Tree Cost by the cross-sectional area of the subject tree. For multi-stemmed trees, the appraised trunk area considers the cross-sectional area of all stems. The Appraised Value is calculated by multiplying the Basic Reproduction Cost by the three depreciation factors (Condition Rating, Functional Limitation Rating, and External Limitation Rating, as described in the Guide).

The appraised value is therefore calculated using the following equation:

*Basic Tree Cost = Appraised Tree Trunk Area X Unit Tree Cost*

*Appraised Value = Basic Tree Cost X Condition Rating X Functional Limitation Rating X External Limitation Rating*

Functional Limitation Ratings and External Limitation Ratings are calculated according to the methods outlined in the guide. Condition Ratings were calculated based on the assessed condition of the trees on the site and in accordance with the guide. The final values were rounded to the nearest \$100 for values greater than \$2000, and to the nearest \$5 for values less than \$2000.

For trees with appraisal values less than \$744.00 (Town of Oakville's minimum value per tree), their values were set to \$744.00. Refer to Table 2 for the individual tree value computation.

### **3.0 Existing Site Conditions**

A northern portion of 340 Burnhamthorpe Road East is occupied by a golf range and associated facilities. A southern half of 340 Burnhamthorpe Road East is occupied by agricultural fields and a woodlot. A rural residential dwelling exists at 3437 Trafalgar Road. Tree resources exist in the form of landscape trees and natural generation. Refer to Figures 1-5 for the existing site conditions.

### **4.0 Individual Tree Resources**

A total of 713 individual trees and one tree polygon were included in the inventory.

The tree resources are comprised of Freeman Maple (*Acer x freemanii*), Manitoba Maple (*Acer negundo*), Norway Maple (*Acer platanoides*), Crimson King Maple (*Acer platanoides* 'Crimson King'), Silver Maple (*Acer saccharinum*), Sugar Maple (*Acer saccharum*), Northern Catalpa (*Catalpa speciosa*), Russian Olive (*Elaeagnus angustifolia*), American Beech (*Fagus grandifolia*), White Ash (*Fraxinus americana*), Green Ash (*Fraxinus pennsylvanica*), Shademaster Honey Locust (*Gleditsia triacanthos* 'inermis'), Butternut (*Juglans cinerea*), Black Walnut (*Juglans nigra*), Apple (*Malus spp.*), Weeping Mulberry

(*Morus alba* 'Pendula'), Ironwood (*Ostrya virginiana*), Norway Spruce (*Picea abies*), White Spruce (*Picea glauca*), White Poplar (*Populus alba*), Eastern Cottonwood (*Populus deltoides*), Black Poplar (*Populus nigra*), Sweet Cherry (*Prunus avium*), Pin Cherry (*Prunus pensylvanica*), Black Cherry (*Prunus serotina*), Schubert Cherry (*Prunus virginiana* 'Schubert'), Pear (*Pyrus calleryana*), White Oak (*Quercus alba*), Bur Oak (*Quercus macrocarpa*), Red Oak (*Quercus rubra*), Black Locust (*Robinia pseudoacacia*), White Willow (*Salix alba*), Ivory Silk Lilac (*Syringa reticulata* 'Ivory Silk'), Eastern White Cedar (*Thuja occidentalis*), Emerald Cedar (*Thuja occidentalis* 'Emerald'), Basswood (*Tilia americana*), White Elm (*Ulmus americana*), and Siberian Elm (*Ulmus pumila*).

Refer to Table 1 for the full tree inventory and Figures 1-5 for the location of trees reported in the inventory. See Appendix A for site photographs.

### Butternut

Trees BN1-BN6 are Butternut and Butternut species is protected under the federal government's Endangered Species Act (MNR, 2007). This tree is listed as an endangered species as per the COSEWIC list and until permission has been granted, the tree must be protected 25m from its base. The proposed development on the subject properties will require the removal of Trees BN1-BN6. Trees BN5 and BN6 are completely dead and exempt from Endangered Species Act.

A formal assessment was completed for live Butternut, BN1-BN4, and reported to the MECP. Butternut Health Assessment identified BN1-BN4 as a non-retainable trees (category 1). A waiting period of 30 days is required prior to the removal of the trees. Once the assessment is approved, BN1-BN4 will be no longer protected by the Endangered Species Act and no permit from MECP will be required for their removal. Table 1 for the inventory information of Trees BN1-BN6 and Figures 1-5 for the locations of the trees.

## **5.0 Proposed Development**

The proposed development includes the demolition of the existing buildings and the construction of a multi-block subdivision. Refer to Figure 1 for the existing conditions and the proposed site plan.

## **6.0 Discussion**

The following sections provide a discussion and analysis of tree impacts and tree preservation relative to the proposed development and existing conditions.

### *6.1 Development Impacts / Tree Removals*

The removal of 692 individual trees and one tree polygon is required to accommodate the proposed development. Required tree removals include Trees 301-488, 701-821, 823-825, 827-896, 898-900, 902-905, 909-997, 999, 1000, 1501-1679, A, B, D-L, N-V, X-Z, AB, AC, AF, AN, BN1-BN6, and P1. All trees that require removal have direct conflicts with the proposed subdivision. The removal of one dead Basswood with approximately 50cm DBH, located on the adjacent property, is recommended due to safety hazards. Refer to Figures 1-5 for the locations of the required tree removals.

## 6.2 Tree Preservation

The preservation of the remaining 21 trees will be possible with the use of appropriate tree protection measures. Refer to Figures 1-5 for the locations of the trees and polygons identified for preservation, the locations of the required tree preservation fencing, the tree preservation fencing specifications, and the general Tree Protection Plan Notes.

## 6.3 Tree Valuation

A valuation was calculated for the trees located within road right-of-way. The total appraised value of these Town-owned street trees was calculated to be \$10,332.00.

Refer to Table 2 for the individual tree valuation calculations.

## 7.0 Summary and Recommendations

Kuntz Forestry Consulting Inc. was retained by DTAH to complete a Tree Inventory and Preservation Plan for the properties located on 340 Burnhamthorpe Road East and 3437 Trafalgar Road in Oakville, Ontario. A tree inventory was conducted and reviewed in the context of the proposed site plan.

The findings of the study indicate a total of 713 trees and one tree polygon on and within six metres of the subject properties. The removal of 692 trees and one tree polygon is required to accommodate the proposed development. The remaining 21 trees can be preserved with the use of appropriate tree protection measures.

The following recommendations are suggested to minimize impacts to trees identified for preservation. Refer to Figure 1 for the general Tree Protection Plan Notes.

- Tree protection barriers and fencing should be erected at locations as prescribed on Figure 1. All tree protection measures should follow the guidelines as set out in the tree preservation plan notes and the tree preservation fencing detail.
- No construction activity including surface treatments, excavations of any kind, storage of materials or vehicles, unless specifically outlined above, is permitted within the area identified on Figure 1 as a tree protection zone (TPZ) at any time during or after construction.
- Branches and roots that extend beyond prescribed tree protection zones that require pruning must be pruned by a qualified Arborist or other tree professional. All pruning of tree roots and branches must be in accordance with Good Arboricultural Standards.
- Site visits pre, during, and post construction are recommended by either a certified consulting arborist (I.S.A.) or registered professional forester (R.P.F.) to ensure proper utilization of tree protection barriers. Trees should also be inspected for damage incurred during construction to ensure appropriate pruning or other measures are implemented.

Respectfully Submitted,

### Limitations of Assessment

*Only the tree(s) identified in this report were included in the inventory. The assessment of the trees presented in this report has been made using accepted arboricultural techniques. These may include a visual examination taken from the ground of all the above-ground parts of the tree for structural defects, scars, external indications of decay such as fungal fruiting bodies, evidence of attack by insects, discoloured foliage, the condition of any visible root structures, the degree of lean (if any), the general condition of the trees and the identification of potentially hazardous trees or recommendations for removal (if applicable). Where trees could not be directly accessed (i.e. due to obstructions, and/or on neighbouring properties), trees were assessed as accurately as possible from nearby vantage points.*

*Locations of trees provided in the report are determined as accurately as possible based on the best information available. If official survey information is not provided, tree locations in the report may not be exact. Where KFCI's in-house GPS unit is used (if applicable), tree locations are accurate only to the extent that the technology allows, which can be variable based on satellite available, RTK network / cell coverage, canopy coverage, and/or projection transformation limitations. In this case, if trees occur on or near property boundaries, an official site survey may be required to determine ownership utilizing specialized survey protocol to gain precise location.*

*Furthermore, recommendations made in this report are based on the development plans that have been provided at the time of reporting. These recommendations may no longer be applicable should changes be made to the development plan and/or grading, servicing, or landscaping plans following report submission.*

*Notwithstanding the recommendations and conclusions made in this report, it must be recognized that trees are living organisms, and their health and vigor constantly change over time. They are not immune to changes in site conditions or seasonal variations in the weather conditions. Any tree will fail if the forces applied to the tree exceed the strength of the tree or its parts.*

*Although every effort has been made to ensure that this assessment is reasonably accurate, the trees should be re-assessed periodically. The assessment presented in this report is valid at the time of inspection.*
