**Re: Bronte Green Community – Tree Preservation
Bronte Road
Town of Oakville
Our Project No. 2344**

Further to your request we have prepared this letter report which summarizes work completed by our office and provides recommendations related to tree preservation at this future residential community.

In July 2012 Cosburn Giberson Landscape Architects (CGLA) was commissioned by Bronte Green Corporation to complete an inventory of all existing trees within the study area (Saw Whet Golf Course) in the Town of Oakville to be developed as a residential community.

During August – September 2012, all live trees over 10cm trunk diameter at 1.4 metre height (DBH) were tagged with sequentially numbered aluminum tags. Concurrently, surveyors were coordinated to tie-in all tagged trees and provide base elevation for each tree.

During October – November 2012, all tagged trees were inventoried and a Tree Survey/Arborist's Report was prepared.

Tree inventory information collected for each tree included the following:

- tree tag number
- botanical and common name
- diameter at 1.4 metre height (DBH) - (in centimetres)
- tree overall height (in metres)
- condition rating (poor, fair, good)
- crown spread (in metres)
- tree quality rating (poor, fair, good, very good)
- remarks (presence of disease, disturbances, arboricultural comments, associated woody vegetation, etc.)
- Preservation priority rating (high, moderate, low)
- Transplant potential (High, low)

General biological health, condition and quality rating for each tree was assessed using the following criteria:

Condition	This is an opinion, based on visual inspection of rooting habit, trunk integrity (basal stem, roots), canopy structure and vigour, presence of dieback and decay, insects or disease. The range used is Good (G), Fair (F), Poor (P)
Quality	An opinion of the overall quality of the vegetation based on species biological health, condition and location. The range used is Very Good (VG), Good (G), Fair (F), Poor (P).

Tree Inventory – Summary

Of the trees that were tagged, tied-in by survey and inventoried, 858 (49%) were rated to have preservation priority and 260 (15%) were rated to have transplant potential.

A total of 62 tree species including cultivated varieties were identified. Of these 62 species, 36 (58%) were native species and 26 (42%) were non-native species (refer to Master Tree Species List enclosed).

Although only 10 of the 62 identified tree species were conifers (16%), they represent a significant proportion of the total number of trees inventoried.

The majority of inventoried trees were in good biological health and condition. However, as the subject property is an active golf course, damage to tree trunks from turf maintenance machinery was occasionally found. There was also evidence of excess soft growth due to over-fertilization of trees.

With respect to size class, trees within the active portions of the golf course were generally smaller, from 15-25 cm on average with the occasional larger specimen up to 60 cm or more within wooded peripheral zones adjacent to golf course fairways.

Individual tree trunk diameters at breast height ranged from 10 cm to 110 cm with a few multi-stem trees over 150 cm cumulative trunk diameter.

Tree Preservation – Summary

Within tableland areas of the study area wholesale tree preservation will be limited by proposed grading and layout for future roads, lots and blocks. Opportunities for tree preservation exist within the valleylands and creek beds including the Natural Heritage System (NHS) associated with Fourteen Mile Creek adjacent to the proposed subdivision lands. High landscape value tree specimens found around the property perimeter may be preserved in rear lots or edges of blocks, site grading permitting.

Tree Transplanting Program

There were 260 trees which were identified as possessing transplant potential within the study area. There is an opportunity to transplant a proportion of these trees within and along the edges of the Fourteen Mile Creek tributary from Bronte Road to the NHS, as well as buffer and open space blocks. It is recommended the transplants be performed by tree spade and a maintenance program including mulching and watering be implemented.

We trust this information will assist you in implementing the Tree Preservation process.

Should you have any questions or comments regarding this letter report, kindly contact the undersigned.

Yours truly,

Cosburn Giberson Consultants Inc.

Date: December 18, 2012

Cosburn Giberson Landscape Architects

Tree Survey/Arborists Report Key Code and Heading Explanation

1. Tree No. This refers to the number on metal tree tags placed typically on the south side of trunks at approximately 1.5 m height.
2. Common Name Due to the varied use of common names, these have been listed for ease of reference only. For accurate referral botanical names should be used.
3. Botanical Name These names will be based on the following reference sources: A) Farrar, John Laird, 1995, Trees in Canada; B) Canada Department of Agriculture, Pub. 1286, 1968, Ornamental Shrubs for Canada; C) Wyman, D., 1965, Trees for American Gardens; D) Soper, J.H. and Heimbürger 1982. Shrubs of Ontario, Royal Ontario Museum, Toronto.
4. Diameter at Breast Height Measurement of trunk diameter at 1.4m (4.5ft) from grade.
5. Height This measurement refers to the top of crown and is accurate to \pm 2m only.
6. Condition This is an opinion, based on visual inspection of rooting habit, trunk integrity (basal stem, roots), canopy structure and vigour, presence of dieback and decay, insects or disease. The range used is Good (G), Fair (F), Poor (P).
7. Quality An opinion of the quality of the vegetation based on species, biological health and condition and location. The range used is Very Good (VG), Good (G), Fair (F), Poor (P).
8. Crown Spread This is a measurement of the diameter, in meters, of the width of the tree crown. It is taken from drip line to drip line and generally represents the tree's area of ground influence.
9. Remarks These are more specific comments on the tree's condition, quality, its location or proximity to physical features and any factors which may influence its growth.
10. Priority for Preservation This rating is based on the tree's overall biological health and condition, maturity, history of disturbance and species type/value. This is intended to be a general guideline as to the retention value of the tree independent of any proposed action. The range used is High (H), Medium (M), and Low (L).
11. Transplant Potential This rating is based on the tree's potential for survivability following transplanting to a nearby location. Criteria applied include the tree's overall health, condition, stage of life cycle, species type and proposed land use. The range used is High (H), and Low (L)

1770	<i>Crataegus spp.</i>	10x2/8/4	5	G	4	G	buckthorns adjacent, multi-stem	M	L
1771	<i>Fraxinus americana</i>	13	7	G	4	G	buckthorns adjacent	M	L
1772	<i>Crataegus spp.</i>	8/5x4/4x3	4	G	4	G	buckthorns, 3m to edge, multi-stem	M	L
1773	<i>Fraxinus americana</i>	2	3	G	1	G	buckthorns adjacent	M	L
1774	<i>Fraxinus americana</i>	4	5	G	2	G	buckthorns adjacent	M	L
1775	<i>Crataegus spp.</i>	10/8/6/5	2½	F	2	F	in decline, buckthorns, multi-stem	M	L
1776	<i>Crataegus spp.</i>	5/3x2	2	F	1½	F	multi-stem	M	L
1777	<i>Crataegus spp.</i>	8/5x2/3	3	G	2	G	buckthorns adjacent	M	L
1778	<i>Fraxinus americana</i>	6	6	G	2	G	buckthorns adjacent	M	L
1779	<i>Fraxinus americana</i>	5	4	G	1½	G	buckthorns adjacent	M	L
1780	<i>Crataegus spp.</i>	5x2/3x3	2	F	2	F	buckthorns adjacent, multi-stem	M	L
1781	<i>Crataegus spp.</i>	4	3	F-G	1½	F-G	buckthorns adjacent	M	L
1782	<i>Fraxinus americana</i>	9	5	G	2½	G	buckthorns, woody debris pile	M	L
1783	<i>Crataegus spp.</i>	15x2/13/11	4½	F	4	F-G	buckthorns adjacent, multi-stem	M	L
1784	<i>Fraxinus americana</i>	14	7	G	4½	G	buckthorns adjacent	L	L
1785	<i>Fraxinus americana</i>	4	4	G	2	G	buckthorns adjacent	L	L

Tree No.	Botanical Name	Diameter at 1.4m Height (cm)	Height (m)	Condition Rating (P,F,G)	Crown Spread (m)	Quality Rating (P,F,G,VG)	Remarks	Priority for Preservation	Transplant Potential
1786	<i>Prunus virginiana</i>	6	4	G	3½	G	buckthorns adjacent	H	L
1787	<i>Crataegus spp.</i>	13/12/6/4	4	F-G	3	F-G	buckthorns adjacent, multi-stem	M	L
1788	<i>Crataegus spp.</i>	5	3	F	2½	F	buckthorns, leaning	L	L
1789	<i>Fraxinus americana</i>	5	5	G	2	G	buckthorns, crooked stem	L	L
1790	<i>Crataegus spp.</i>	4/3x2	3	F	3	F	buckthorns, crowded, multi-stem	L	L
1791	<i>Crataegus spp.</i>	4x2	2	P-F	3	F	buckthorns, leaning, dead stem, 2 stem	L	L
1792	<i>Fraxinus americana</i>	22	8	G	6	G	buckthorns adjacent	L	L
