1.0 Executive Summary

Background

C.F. Crozier & Associates Inc. (Crozier) was retained by 1539059 Ontario Inc. to prepare a Transportation Impact Study in support of Official Plan Amendment and Zoning By-law Amendment for a proposed mixed-use development located at 349 Davis Road in the Town of Oakville, Regional Municipality of Halton. The purpose of the study is to evaluate the transportation related impacts of the proposed development on the boundary road network and to recommend any required mitigation measures, if warranted.

Per the Site Plan prepared by Studio Veronica Madonna Architect (dated September 14, 2022), the development proposes a 58-storey mixed-use building which includes residential, commercial, and office uses. A total of 622 vehicle and 400 bicycle parking spaces are proposed. The site is proposed to be serviced by a full moves access connection to Davis Road.

The Transportation Impact Study was completed in accordance with the Region of Halton Transportation Impact Study Guidelines (January 2015) and the General Guidelines for the Preparation of Traffic Impact Studies (MTO, February 2021). As confirmed with the MTO, Region, and Town, the study assessed the following study intersections:

- Trafalgar Road and QEW westbound ramps / North Service Road East
- Trafalgar Road and QEW eastbound ramps
- Trafalgar Road and South Service Road East / Cross Avenue
- Trafalgar Road and Cornwall Road
- South Service Road East and Davis Road

The development proposal does not conform to the plans identified in the Midtown Oakville Class Environmental Assessment (MOCEA). Therefore, most improvements outlined in the MOCEA were not considered in the analysis herein. However, in the 2035 horizon analysis, the QEW eastbound off-ramp identified in the MOCEA was added to the South Service Road East and Davis Road intersection, as requested by Town staff.

Existing Conditions

A turning movement count (TMC) survey was conducted for the existing 2022 year and compared to TMC's obtained from prior pre-pandemic years at the study intersections. As confirmed through the Terms of Reference correspondence, traffic volumes for the existing conditions scenario were established by retaining the higher volumes between the two data sets for every turning movement at the study intersections.

The study intersections are operating at acceptable levels of service (i.e., LOS "D" or better) during the weekday a.m. and p.m. peak hours. A few movements are operating near capacity at the intersection of Trafalgar Road and QEW ramps. Similarly, the 95th percentile queuing results indicate a couple auxiliary turn storage lanes may be exceeded during the peak hours at the Trafalgar Road intersections with Cornwall Road and South Service Road East / Cross Avenue. Overall, the boundary road network currently operating adequately.

Future Background Conditions

As confirmed through the Study Terms of Reference, a horizon year of the expected full development buildout (2025), along with the five year (2030) and ten year (2035) horizons were used for the purposes of analysis. Similarly, growth rates were established through the Terms of Reference correspondence and applied to the existing traffic volumes to forecast future background traffic growth.

The following background developments in the study area were identified and accounted for under future background conditions:

- 157 Cross Avenue
- 271 Cornwall Road and 485 Trafalgar Road
- 320 Davis Road
- 166 South Service Road East (2030 and 2035 horizons only)

A QEW eastbound off-ramp connection to South Service Road East, similar to what was identified in the Midtown Oakville Class Environmental Assessment (MOCEA) was added in the ultimate 2035 horizon analysis per the request of the Town. The traffic volumes at the existing QEW eastbound off-ramp to Trafalgar Road and the planned QEW eastbound off-ramp to South Service Road East were forecast based on the methodology of the MOCEA.

Analysis of future background traffic operations indicates that the study intersections along Trafalgar Road are expected to operate near capacity in the ultimate 2035 horizon with a few movements at the QEW ramp intersections operating above capacity. However, under all future background analysis scenarios, the boundary road network is forecast to operate at a LOS "D" or better during the peak hours, except at the Trafalgar Road and South Service Road East intersection, where operations are project to be a LOS "E" during the critical p.m. peak hour. Several opportunities for operational improvements were identified in the future background and are included as part of the Study recommendations.

Site Generated Traffic

In the 2025 horizon year, the proposed development is forecast to generate 110 and 104 vehicle trips in the a.m. and p.m. peak hours, respectively. In the 2030 and 2035 horizon years, the proposed development is forecast to generate 102 and 95 vehicle trips in the a.m. and p.m. peak hours, respectively – consistent with the modal split projections provided by the Regional staff. In addition, the ultimate horizon 2035 trip generation forecast projects 39 and 38 non-vehicular trips generated by the proposed development in the a.m. and p.m. peak hours, respectively.

For the purposes of traffic analysis, vehicle trips were assigned to the boundary road network using a combination of 2016 Transportation Tomorrow Survey (TTS) data, expected destinations, and existing travel patterns.

Future Total Traffic Operations

At the study intersections, traffic operations are forecast to remain similar to their respective future background horizons. Under the ultimate 2035 horizon year analysis, at all study intersections except the Trafalgar Road and QEW eastbound ramps intersection, the study intersections are forecast to operate similar to future background conditions at a LOS "D" or better during the peak hours. At the intersection of Trafalgar Road and QEW eastbound ramps, operations are projected to be LOS "E" during the critical p.m. peak hour, the same as 2035 future background conditions. The maximum control delay increment and volume-to-capacity ratio increase compared to future background conditions at any of the study intersections is forecast to be minimal, at 2.1s and 0.01, respectively.

This indicates that site traffic does not materially impact traffic operations at the study intersections. Therefore, no external road improvements attributable to the proposed development are required.

Site Access Safety Review

The available sight distance at the proposed site connection to Davis Road exceeds the minimum sight distance requirements set out in the Transportation Association of Canada (TAC) Geometric Design Guide for Canadian Roads (GDGCR), June 2017. Further, the site satisfies the minimum corner clearance and access spacing requirements per the TAC-GDGCR. No maneuverability constraints within the site for waste collection or fire trucks is identified.

Transportation Demand Management

There are existing and planned Transportation Demand Management (TDM) opportunities in the Town of Oakville and near the site to encourage the use of non-auto transportation options.

In addition to the background active transportation and transit improvements expected in the vicinity of the subject site, the development proposal includes several site specific transportation demand management measures that are expected to reduce dependence on vehicle transportation. The development proposal includes a sidewalk connection along the north side of Davis Road to South Service Road East. This direct connection to the existing pedestrian network improves safety and convenience of pedestrian movement and access to the boundary roadway, transit and nearby land uses. The site additionally proposes a bicycle parking supply of 400 spaces, which is in excess of both the Town of Oakville Zoning By-Law requirements and the Midtown Oakville Parking Strategy.

Parking Review

The proposed parking supply of 622 spaces satisfies the Town of Oakville's Zoning By-Law No. 2014-014 minimum vehicle parking requirements. Additionally, the site provides the required barrier free accessible parking spaces.

Public Information Session

Traffic related concerns were raised by some attendees of the 349 Davis Road development proposal Public Information Session conducted on March 2, 2023. Based on the traffic review in **Section 10.0** focused on these concerns, the Midtown Oakville area can be served adequately without the need for the QEW EB underpass off-ramp.

Recommendations

Based on the Study findings, it is recommended that:

- The MTO and Region explore opportunities including timing plan setup adjustments and or turning movement prohibitions (as applicable) in future to increase capacity for southbound right-turn traffic on Trafalgar Road entering the QEW WB on-ramp and north Service Road.

- At the intersection of Trafalgar Road and Cornwall Road, the Region and Town explore mitigation measures such as timing plan coordination along Cornwall Road (if not already), timing plan adjustments and additional regulatory signage (e.g., do not block intersection) to limit operational and potential safety issues at the adjacent upstream intersections on Cornwall Road.

- The MTO explore adding a right-turn storage lane to the QEW eastbound off-ramp connection to Trafalgar Road in future (i.e., beyond 2030) if traffic volumes follow the pattern forecasted by the MOCEA.

- The remaining study intersections aside the proposed site access should be monitored by the Region and Town with timing plans adjusted in future for optimal operations as needed.

Conclusion

In conclusion, the traffic generated from the proposed residential development will not materially impact operations of the boundary road network. The Official Plan Amendment and Zoning By-Law Amendment (ZBA) applications for the 349 Davis Road residential development can be supported from a traffic operations perspective as the boundary road system can accommodate the increase in traffic volumes attributable to the proposed development.

2.0 Introduction

2.1 Background

C.F. Crozier & Associates Inc. (Crozier) was retained by 1539059 Ontario Inc. to prepare a Transportation Impact Study in support of Official Plan Amendment and Zoning By-law Amendment for a proposed mixed-use development located at 349 Davis Road in the Town of Oakville, Regional Municipality of Halton.

2.2 Submissions History

A submission for the 349 Davis Road development proposal was initially made in September 2022, which included an original version of this Traffic Impact Study. This new submission incorporates informal City staff comments and concerns raised by the public at the Public Information Session conducted by Corbett Land Strategies on March 2, 2023. Excerpts from the correspondence with Town staff are included in **Appendix B**.

2.3 Development Proposal

Per the Site Plan prepared by Studio Veronica Madonna Architect (dated September 14, 2022), the development proposes a 58-storey mixed-use building which includes residential, commercial, and office uses. **Appendix A** contains the Site Plan. The site statistics of the proposed development are summarized in **Table 1**.

Table 1: Proposed Development Summary

Land Use	Number of Storeys	Gross Floor Area (GFA)	Number of Units/Spaces
Site Total	**58**	36,674 m^2	N/A
Residential	53	N/A	388 dwelling units
Commercial	1	682 m^2	6 units
Office	1	1470 m^2	4 units
Parking	3+P1-P6	N/A	622 vehicle parking spaces 400 bicycle parking spaces

2.4 Purpose and Scope

The purpose of the study is to evaluate the transportation related impacts of the proposed development on the boundary road network and to recommend any required mitigation measures, if warranted.

The study reviews the following main aspects of the proposed development from a transportation engineering perspective:

- Existing, future background, and future total traffic operations on the boundary road network during the weekday a.m. and p.m. peak hours.
- Forecasted trip generation and distribution of the proposed development.
- Mitigation measures to support the proposed development, if required.

- Transportation safety components, including: sight distance requirements at the site access, access spacing and restrictions, and general safety issues.

The study has been completed in accordance with the Terms of Reference established through email correspondence with Town of Oakville, Halton Region and the Ministry of Transportation of Ontario (MTO) staff. **Appendix B** contains relevant excerpts of the terms of reference correspondence.

The study has also been completed in accordance with the following guidelines:

- Transportation Impact Study Guidelines (Halton Region, January 2015)
- General Guidelines for the Preparation of Traffic Impact Studies (MTO, February 2021)

The Midtown Oakville Class Environmental Assessment (MOCEA, 2014) outlines a new road network for the Midtown Oakville Growth Area to serve future development. The new road network is also reflected within the Town's latest Official Plan (Liveable Oakville Plan, August 31, 2021). As shown on the EA preliminary design plates (**Appendix C**), Cross Avenue (currently South Service Road) is planned to be realigned through the 349 Davis Road site. In addition, a new QEW eastbound off-ramp is planned to connect to the realigned Cross Avenue at a location approximately within the 349 Davis Road property.

Considering the MOCEA makes the subject land virtually undevelopable, the proposed development does not align with the MOCEA future roadway improvements. Therefore, this study assesses the existing road network and identifies road improves as required to support the development proposal.

However, Town staff requested that the analysis include the planned QEW eastbound off-ramp and the Station Road and North South Crossing intersections with the future realigned South Service Road. As confirmed through email correspondence and discussions with the Town, the following resolution for the purpose of conducting this Traffic Study was reached.

- No realignment of South Service Road will be considered as it cuts through the site.

- The existing east approach (cul-de-sac) connection to the South Service Road East and Davis Road intersection is assumed to be the connecting point of the MOCEA QEW eastbound off-ramp. This is only considered in the ultimate 2035 horizon, given MOCEA considered these improvements only in a 2031 horizon. Further, none of the subject MOCEA improvements are part of the current capital works improvements (2018-2027).

- Given the above configuration, the 320 Davis Road site access, a very low traffic generator, is assumed to connect to South Service Road at a point 20m south of the existing intersection.

- The North South Crossing and South Service Road is not considered as no realignment of South Service Road is considered herein.

- The Station Road and connection to South Service Road could be considered if the future volumes on Station Road are available. However, volumes could not be obtained or established from the MOCEA. Further, Station Road is exclusively a bus route and no impact from the development herein outside the findings of the MOCEA is expected. Therefore, this intersection was not assessed.

Additional analysis on a potential reconfiguration of the MOCEA road network that accommodates the current development proposal is not part of the study scope herein.

3.0 Existing Conditions

3.1 Development Lands

The subject property is located in an employment area and is bound by an existing commercial property to the east, South Service Road to the west and north, and Davis Road to the south. The site currently consists of a single-storey brick office building occupied by Powell Insurance Brokers. The subject property is zoned as "Midtown Transitional Employment Zone" per the Town of Oakville's Zoning By-Law. Refer to **Figure 1** for the Site Location.

3.2 Study Intersections

The Traffic Impact Study analyzes the following intersections:

- Trafalgar Road and Queen Elizabeth Way (QEW) westbound ramps / North Service Road E.
- Trafalgar Road and QEW eastbound ramps
- Trafalgar Road and South Service Road East / Cross Avenue
- South Service Road East and Davis Road
- Davis Road and site access

3.3 Boundary Road Network

The boundary road network includes the study intersections and corresponding roadways. The boundary roadways included within the study scope are described in **Table 2**.

Table 2: Boundary Road Network

Feature	Roadway					
	Queen Elizabeth Way / Highway 403	**Trafalgar Road**	**Cornwall Road**	**South Service Road East**	**Cross Avenue**	**Davis Road**
Direction	Two-way (East-West)	Two-way (North-South)	Two-way (East-West)	Two-way (East-West[1])	Two-way (North-South)	Two-way (East-West)
Classification[2]	Provincial Freeway	Major Arterial[3]	Multi-Purpose Arterial	Minor Arterial[34]	Minor Arterial	Local
Jurisdiction	MTO	Halton Region[3]	Town of Oakville			
Speed Limit	100 km/h *Off-Ramp advisory speed is 40 km/h*	60 km/h (at MTO ramp terminals) 50 km/h (south of Argus Road)	60 km/h	Unposted (assumed 50 km/h)	Unposted (assumed 50 km/h)	Unposted (assumed 50 km/h)
Number of travel lanes	Six + Two HOV[5]	Six[3]	Four	Four	Four	Two
Median type	Jersey Barrier (typical freeway separation)	Raised concrete median / paved level median (varies)	Raised concrete median	None	None	None

Note 1: While South Service Road East is primarily an east-west roadway, including at the intersection with Trafalgar Road, a north-south orientation is present at the intersection with Davis Road.
Note 2: Classifications per the Town of Oakville Official Plan
Note 3: South of Cornwall Road, Trafalgar Road experiences a change in classification to a Minor Arterial Road, changes jurisdiction to the Town of Oakville, and possesses two total travel lanes instead of six north of Cornwall Road.
Note 4: Designation not shown due to future roads planned part of Midtown Oakville redevelopment. Assumed Minor Arterial given Cross Avenue designation. The Halton Official Plan indicates both roads as "Major Roads".
Note 5: HOV – High Occupancy Vehicle. HOV lanes present on QEW.

Table 3 outlines the existing traffic control, configurations, and pedestrian crossing provisions at the study intersections on the boundary road network.

Table 3: Study Intersections

Intersection	Control	Approaches	Major Street	Lane Configurations	Pedestrian Crossing
Trafalgar Road and QEW WB ramps / North Service Road	Signal Actuated Coordinated	4	Trafalgar Road	EBL; EBR WBL; WBLT; WBR NBT(x3) SBT(x3); SBTR	West, North, and East approaches
Trafalgar Road and QEW EB ramps	Signal Actuated Coordinated	3	Trafalgar Road	EBL(x2); EBR NBT(x3) SBT(x3)	West and South approaches
Trafalgar Road and South Service Road East / Cross Avenue	Signal Actuated Coordinated	4	Trafalgar Road	EBL(x2); EBTR WBL; WBT; WBR NBL; NBT(x2); NBTR SBL; SBT(x2); SBTR	West, South and East approaches
Trafalgar Road and Cornwall Road	Signal Actuated Coordinated	4	Trafalgar Road	EBL(x2); EBT; EBTR WBL; WBT(x2); WBR NBL; NBT; NBTR SBL(x2); SBT; SBR	All approaches
South Service Road East and Davis Road	Stop (Minor Street Only)	4	South Service Road	EBLTR WBLTR NBLT; NBTR SBLT; SBTR	None
Davis Road and Site Access	Stop (Minor Street Only)	3	Davis Road	EBLTR WBLTR SBLR	None

Figure 2 illustrates the existing boundary road network, including lane configurations, storage lengths, and intersection control.

3.4 Transit Operations

There are several Oakville Transit and GO Transit bus routes that operate in the surrounding area of the subject property. The closest transit bus stop to the site is an approximately 450 meter walk away, located on Trafalgar Road, north of South Service Road East. At approximately 800 meters away, the Oakville GO Station serves as a central transit hub for the Town of Oakville and receives both local transit service, along with regional transit through GO Transit. These transit routes and stations allows for further connection to other routs and consequently mobility to most of the Greater Toronto & Hamilton Area (GTHA) by transit.
Table 4 outlines the GO Transit existing transit routes, direction, days of operations, peak hour headways for routes, and bus stops in the study area as of June 25, 2022.

Table 4 outlines the GO Transit existing transit routes, direction, days of operations, peak hour headways for routes, and bus stops in the study area as of June 25, 2022.

Table 4: Existing GO Transit Services

Route	Start and End Points	Days of Operation	Peak Hour Headways (min)	Bus Stop(s) near study area
1 / 18 Lakeshore West	Union Station to Various	Monday - Sunday	15 min	Oakville GO Station
52-54-56 Oshawa / Oakville	Oakville GO Station to Oshawa GO Station	Monday - Sunday	60 min	Oakville GO Station

Table 5 outlines the Oakville Transit existing transit routes, direction, days of operation, peak hour headways for routes, and bus stops in the study area as of March 20, 2022.

Table 5: Existing Oakville Transit Services

Route	Start and End Points	Days and Hours of Operations[1]	Peak Hour Headways	Bus Stop(s) near study area
1 Trafalgar	Oakville GO Station to Trafalgar / 407 GO Carpool	Monday – Friday 6am – 12am	60 min	Trafalgar Road + north of South Service Road East Oakville GO Station
4 Speers – Cornwall	Bronte GO Station to Clarkson GO Station	Monday – Sunday 6am – 12am	30 min	Oakville GO Station
5 / 5A Dundas	Oakville GO Station to Dundas / 407 GO Carpool	Monday – Sunday 6am – 12am	15 min	Trafalgar Road + north of South Service Road East Oakville GO Station
10 West Industrial	Oakville GO Station to Bronte GO Station	Monday – Friday 7am – 11am 2pm – 6pm	30 min	Oakville GO Station
11 Linbrook	Oakville GO Station to Clarkson GO Station	Monday – Friday 6am – 10pm	60 min	Oakville GO Station
13 Westoak Trails	Oakville GO Station to Bronte GO Station	Monday – Sunday 6am – 11pm	30 min	Trafalgar Road + north of South Service Road East Oakville GO Station
14 / 14A Lakeshore West	Oakville GO Station to Appleby GO Station	Monday – Sunday 6am – 12am	15 min	Oakville GO Station
18 Glen Abbey South	Oakville GO Station to Bronte GO Station	Monday – Sunday 6am – 9pm	30 min	Oakville GO Station
15 Bridge	Oakville GO Station to South Oakville Centre	Monday – Sunday 6am – 9pm	30 min	Oakville GO Station
19 River Oaks	Oakville GO Station to Uptown Core	Monday – Sunday 6am – 9pm	30 min	Trafalgar Road + north of South Service Road East Oakville GO Station
20 Northridge	Oakville GO Station to Uptown Core	Monday – Sunday 6am – 9pm	30 min	Trafalgar Road + north of South Service Road East Oakville GO Station
24 South Common	Oakville GO Station to South Common	Monday to Friday 6am – 12am	15 min	Trafalgar Road + north of South Service Road East Oakville GO Station
26 Falgarwood	Oakville GO Station to Lancaster & Grosvenor	Monday – Friday 6am – 9am 3pm – 7pm	30 min	Trafalgar Road + north of South Service Road East Oakville GO Station
28 Glen Abbey North	Oakville GO Station to Bronte GO Station	Monday – Sunday 6am – 9pm	30 min	Oakville GO Station
83 Blakelock	T.A Blakelock Special to Oakville GO Station	Monday – Friday 3pm	N/A	Oakville GO Station
120 East Industrial	Oakville GO Station to Laird & Ridgeway	Monday – Friday 7am – 10am 3pm – 7pm	30 min	Trafalgar Road + north of South Service Road East Oakville GO Station

Note 1: Hours of operation are approximated to the nearest hourly interval on a weekday.

Appendix D contains relevant transit information.

3.5 Active Transportation Network

The existing pedestrian facilities on the boundary road network are described in **Table 6**. Pedestrian facilities at intersections are identified in **Table 3** within **Section 3.3**.

Table 6: Pedestrian Transportation Network

Roadway	Pedestrian Facilities	Separation from Roadway
Trafalgar Road	~1.5 metre concrete sidewalk (both sides)	~0.5m asphalt separator (both sides)
Cornwall Road	~1.5 metre concrete sidewalk (both sides)	1–6m grass strip / brickwork separators
South Service Road East	~1.3 metre concrete sidewalk (north side) raised asphalt shoulder (south side), (both btwn. Trafalgar Road to Davis Road)	~0.5m asphalt separator (north side only)
Cross Avenue	~1.5 metre concrete sidewalk (both sides)	~0.5m asphalt separator (both sides)
Davis Road	~1.5 metre concrete sidewalk (south side)	~3m grass strip (south side)

There are no current designated cycling facilities within the study area. The nearest cycling trail access to the subject site is located at Trafalgar Road just north of Iroquois Shore Road, approximately 1.3km away. In addition, Trafalgar Road is a designated on-street bike route south of the intersection with Cornwall Road.

3.6 Traffic Data

Pre-pandemic Turning Movement Counts (TMC's) from recent adjacent background studies and Halton Region was available for all intersections except for the Davis Road and South Service Road intersection. As confirmed through the terms of reference with municipal staff, new TMC's were conducted in the existing year at all study intersections and compared to the pre-pandemic volumes.

Table 7 provides a summary of the Turning Movement Count (TMC) surveys, including surveyor, count date and period, along with the identified peak hours. Detailed TMC and signal timing plans used for the analysis herein is provided in **Appendix E**.

Table 7: Traffic Data

Intersection	Surveyor	Count Date	Count Hours	Identified Peak Hours	Peak Hour Factor
Trafalgar Road and QEW WB ramps / North Service Road E.	Spectrum Traffic Data Inc.	April 13, 2022	6:00 – 10:00 A.M.	8:00 – 9:00 A.M.	0.95
			3:00 – 7:00 P.M.	4:30 – 5:30 P.M.	0.97
	Accu-Traffic Inc.	March 7, 2019	7:00 – 9:00 A.M.	7:45 – 8:45 A.M.	N/A
			4:00 – 6:00 P.M.	5:00 – 6:00 P.M.	N/A
Trafalgar Road and QEW EB ramps	Spectrum Traffic Data Inc.	April 13, 2022	6:00 – 10:00 A.M.	8:00 – 9:00 A.M.	0.95
			3:00 – 7:00 P.M.	5:00 – 6:00 P.M.	0.96
	Accu-Traffic Inc.	March 7, 2019	7:00 – 9:00 A.M.	7:45 – 8:45 A.M.	N/A
			4:00 – 6:00 P.M.	5:00 – 6:00 P.M.	N/A
Trafalgar Road and South Service Road East / Cross Avenue	Spectrum Traffic Data Inc.	April 13, 2022	6:00 – 10:00 A.M.	8:15 – 9:15 A.M.	0.95
			3:00 – 7:00 P.M.	5:00 – 6:00 P.M.	0.94
	Accu-Traffic Inc.	November 6, 2019	7:00 – 9:00 A.M.	8:00 – 9:00 A.M.	N/A
			3:00 – 6:00 P.M.	4:30 – 5:30 P.M.	N/A
Trafalgar Road and Cornwall Road	Accu-Traffic Inc.	March 7, 2019	7:00 – 9:00 A.M.	8:00 – 9:00 A.M.	N/A
			4:00 – 6:00 P.M.	4:30 – 5:30 P.M.	N/A
		November 6, 2019	7:00 – 9:00 A.M.	8:00 – 9:00 A.M.	N/A
			11:00 A.M. – 2:00 P.M.	N/A[1]	N/A
			3:00 – 6:00 P.M.	3:30 – 4:30 P.M.	N/A
	Spectrum Traffic Data Inc.	April 13, 2022	6:00 – 10:00 A.M.	8:00 – 9:00 A.M.	0.92
			3:00 – 7:00 P.M.	3:00 – 4:00 P.M.	0.97
South Service Road East and Davis Road		April 13, 2022	6:00 – 10:00 A.M.	9:00 – 10:00 A.M.	0.87
			3:00 – 7:00 P.M.	3:00 – 4:00 P.M.	0.87

Note 1: While counts were undertaken during the midday peak hour, a review of the survey results reveals that midday peak hour traffic volumes are lower than both the a.m. and p.m. peak hour volumes. Thus, evaluation of the a.m. and p.m. Peak hours captures worst case conditions at the Trafalgar Road and Cornwall Road study intersection.
N/A: Not available due to TMC's showing only peak hour volumes.

For the purpose of a conservative analysis, the highest traffic volume between the existing counts and the pre-pandemic counts for every turning movement at all study intersections were retained as the existing 2022 volumes. Further, traffic volumes were balanced between the QEW ramp intersections along Trafalgar Road. This data refinement process resulted in the 2022 existing conditions traffic volumes outlined in **Figure 3**, which serve as a baseline for all subsequent future analysis.

No traffic counts were undertaken at the site access connection to Davis Road. To model the traffic volumes at this intersection, traffic data from the South Service Road East and Davis Road intersection (outlined in **Table 7**) was relied upon to estimate through movements. Further, the subject site currently contains a single-storey brick office building that is expected to generate some vehicle trips. These existing vehicle trips were estimated using the Institute of Transportation Engineers Trip Generation Manual, 11th Editions, and were applied at the Davis Road and site access study intersection. It is noted that these vehicle trips are included in the existing conditions and future background scenarios, and are replaced under the future total scenarios given the proposed development replaces the exiting office building. Vehicle trips attributable to the existing site use was not added to the other study intersections given the traffic surveys already capture these trips.

3.7 Traffic Modelling

3.7.1. Modelling Approach

The boundary road network was modelled in Synchro 11 using existing roadway geometrics and the identified traffic data in **Section 3.6**. The methodology of modelling the intersection signal timing plans consisted of applying the available timing plans for the existing conditions scenario, maintaining the cycle lengths and phasing of the obtained timing plans, but optimizing the phasing splits for the projected traffic volumes in the future horizon scenarios. Signal timing plans are included in **Appendix E**.

The results for signalized intersection operations were derived from Synchro. The results for unsignalized intersection operations were derived using HCM2000 methodology. The 95th percentile queue lengths were derived from SimTraffic. The Level of Service (LOS) definitions for signalized and unsignalized intersections are included in **Appendix F**.

3.7.2. Critical Volume-to-Capacity Ratios

The MTO considers a movement to be critical when the volume-to-capacity ratio exceeds 0.75 for an off-ramp approach at a ramp terminal or exceeds 0.85 for all other movements at intersections under MTO jurisdiction. As such, the ramp terminal intersections along Trafalgar Road were evaluated using these thresholds.

The Region of Halton considers a movement to be critical when the volume-to-capacity exceeds 0.85 for through or shared movements, or 0.95 for exclusive turning movements. The remaining study intersections aside from the MTO ramp intersections were evaluated using these thresholds.

3.8 Intersection Operations

The existing intersection operations at the study intersections were analyzed using the existing traffic volumes illustrated in **Figure 3.** Detailed capacity analysis worksheets are included in **Appendix G**.

Table 8 outlines the 2022 existing traffic operations.

Table 8: 2022 Existing Traffic Operations

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Trafalgar Road and QEW WB ramps / North Service Road E.	Signal	A.M.	C	21.5s	**0.96 (SBR[4])**	None
		P.M.	C	20.4s	**0.94 (SBR[4])**	None
Trafalgar Road and QEW EB ramps	Signal	A.M.	C	25.2s	**0.88 (EBR)**	None
		P.M.	C	25.2s	**0.79 (EBL)**	None
Trafalgar Road and South Service Road East / Cross Avenue	Signal	A.M.	D	37.4s	0.73 (SBT)	88.8m > 55.0m (SBL)
		P.M.	D	35.6s	0.87 (EBL)	166.4m > 130.0m (EBL1) 56.5m > 55.0m (SBL)
Trafalgar Road and Cornwall Road	Signal	A.M.	D	35.3s	0.82 (EBL)	109.6m > 85.0m (EBL1) 118.8m > 105.0m (EBL2)
		P.M.	D	39.3s	0.83 (EBL)	103.8m > 85.0m (EBL1) 113.6m > 105.0m (EBL2)
South Service Road East and Davis Road	Stop (Minor)	A.M.	B	10.6s	0.06 (NB)	None
		P.M.	B	11.4s	0.08 (SB)	None
Davis Road and Site Access	Stop (Minor)	A.M.	A	8.4s	0.01 (EB)	None
		P.M.	A	8.4s	0.01 (SB)	None

Note 1: The Level of Service of a signalized intersection is based on the average control delay per vehicle (Synchro/ICU). The Level of Service of a stop-controlled intersection is based on the delay associated with the critical minor road approach (HCM2000).

*Note 2: The critical v/c ratio is considered to be the maximum v/c ratio for movements at the intersection where the maximum v/c ratio does not exceed the critical thresholds identified in **Section 3.7.2**. All v/c ratios that exceed the critical thresholds outlined in are bolded.*

Note 3: The 95th percentile queue lengths were derived from SimTraffic reports using 15-minute seeding, 60-minute simulation and an average of 5 runs. Queues which exceed the designated storage length of the turn lane but can be accommodated by a centre turn lane were not documented in this table.

Note 4: SBR – Refers to southbound movement to QEW WB on-ramp and North Service Road.

The study intersections are operating adequately under 2022 existing conditions, at a LOS "D" or better during the weekday peak hours.,

The southbound right-turn movement at the intersection of Trafalgar Road and QEW WB off/on ramps / North Service Road exceeds the critical volume-to-capacity thresholds outlined in **Section 3.7.2** in both peak hours, and is nearing capacity. Therefore, it is recommended that the intersection be monitored in future and apply timing plan adjustments and or turning movement prohibitions (as applicable) to accommodate traffic demand and maintain optimal intersection operations. For future scenarios herein, the signal timing plan splits were optimized to provide additional capacity for southbound traffic entering the QEW WB on-ramp.

The operations at the intersection of Trafalgar Road and QEW EB on/off-ramps are at a LOS "C" or better during the peak hours. The volume-to-capacity ratios show operations for a few through movements are near capacity though below 1.00. Given the level of densification around the roadway and considering Trafalgar Road is a major arterial, with South Service Road being a minor

arterial, such operational issues are expected during the peak hours. However, the intersection should be monitored and timing plans adjusted in future for optimal operations as needed.

The signalized intersection of Trafalgar Road and South Service Road East / Cross Avenue is operating at a LOS "D" or better during the peak hours. Based on the 95th percentile queuing results, a couple of auxiliary turning movement storage lanes may be occasionally exceeded onto the taper and or adjacent through lane during the peak hours.

The signalized intersection of Trafalgar Road and Cornwall Road currently operates at a LOS "D" during the peak hours. No volume-to-capacity ratios for movements exceed the critical thresholds. The eastbound left-turn 95th percentile queueing results suggest that vehicles may occasionally queue beyond the storage lanes into the adjacent through lanes and potentially block the Oakville GO Station parkade access connection to the Cornwall Road west approach during the peak hours. It is therefore recommended that the Region monitor this intersection and consider timing plan coordination along Cornwall Road (if not already so), timing plan adjustments and additional regulatory signage (e.g., do not block intersection) to limit operational and potential safety issues at the adjacent upstream intersections on Cornwall Road.

The stop controlled intersection of South Service Road East and Davis Road currently operates below capacity at a LOS "B" during the peak hours. Similarly, the existing site access connection to Davis Road serving the existing single-storey office building operates below capacity at a LOS "A" or better during the peak hours.

4.0 Future Background Conditions

4.1 Horizon Years

The proposed development is anticipated to be built-out by 2025. The MTO's TIS guidelines require analysis of the buildout year, along with five and ten years beyond the estimated year of full build-out. The Region of Halton typically requires a five year horizon. Given the MTO approach results in a more comprehensive approach than the latter, the MTO required horizon years were used in the analysis herein. Therefore, the following horizon years were analyzed: 2025 (buildout), 2030 (five-year horizon) and 2035 (ten-year horizon). This study horizons were confirmed through the Terms of Reference correspondence with municipal staff (excerpts in **Appendix B**).

4.2 Growth Rates

As confirmed with the Region and MTO, an industry standard 2% per annum growth rate, compounded annually, was assumed and applied for the MTO ramps and the arterial roadways. The growth rate assumptions combined with the conservative methodology of taking the highest of two TMC surveys for establishing existing traffic volumes (per **Section 3.6**) may result in an overestimate of future volumes; therefore, long-term operational issues identified herein maybe overstated.

4.3 Background Developments

Background developments were confirmed through Terms of Reference correspondence, and thus were accounted for under future background conditions. The developments are outlined in **Table 9.**

Table 9: Background Developments

Development	Location	Development Proposal
157 Cross Avenue	North of Cross Avenue, between the 165 and 117 Cross Avenue properties, and across from the Oakville GO Station north parking lot.	A 26-storey mixed-use tower with 252 dwelling units, 579 m^2 GFA of commercial/office uses, and 289 m^2 of ground floor retail.
Olde Oakville Market Place (271 Cornwall Road and 485 Trafalgar Road)	East of and adjacent to Trafalgar Road, north of Cornwall Road, and south of the CN Oakville subdivision.	Two towers at 19 and 14 storeys. A total of 292 dwelling units, 1,321 m^2 GFA of office space, 1,013 m^2 GFA of retail and a 1,732 m^2 Gym.
320 Davis Road	Bounded by Davis Road to the north, South Service Road East to the east, and a parking lot / commercial plaza to the west and south.	Pumping Station Building Expansion of approximately 360 m^2 GFA.[1]
166 South Service Road East	South of South Service Road East and west of the Value Village store and parking lot. Surrounding commercial uses.	A three tower residential development with approximately 1,720 residential dwelling units.

Note 1: Existing Building approximately 235 m^2 GFA. The existing and future GFAs of each building component was measured using the landscape drawing.

As the 166 South Service Road East background development does not have an associated Transportation Impact Study, vehicle trips were estimated herein. The 166 South Service Road East background development trips were forecast using the Institute of Transportation Engineers' Trip Generation Manual, 11th Edition. The land use category 222 "Multifamily Housing (High-Rise)" was applied to the 1,720 residential dwelling units. It is assumed that the background development will be built out after the 2025 horizon year, therefore, the background development was incorporated into the 2030 and 2035 analysis scenarios.

To remain consistent with the methodology applied for the proposed development, the ITE vehicle trip generation forecast was reduced to the anticipated modal split as outlined in the Region of Halton Transportation Master Plan to result in the vehicle trip generation forecast for the background development; consistent with Regional staff request. **Table 10** summarizes the 166 South Service Road East background development trip generation forecast.

Table 10: 166 South Service Road East Background Trip Generation

Methodology	Peak Hour	Trip Generated		
		Total	Inbound	Outbound
ITE Vehicle Trip Generation Forecast[1] (LUC 222, Dense Multi-Use Urban)	A.M.	378	42	336
	P.M.	327	226	101
Adjusted ITE Vehicle Trip Generation (assumed 72% vehicle modal split)	A.M.	**336**	**37**	**299**
	P.M.	**291**	**201**	**90**

Note 1: Vehicle Modal Share is assumed to be 81% in existing conditions. Refer to **Section 5.2.3** for more details.

Therefore, in both the 2030 and 2035 horizon years, the 166 South Service Road East background development is forecast to generate 336 and 291 vehicle trips in the a.m. and p.m. peak hours, respectively.

The 166 South Service Road East background development trips were assigned to the road network based on Transportation Tomorrow Survey data (refer to **Section 5.3**) and ease of access. The trip distribution used for the 166 South Service Road East background development is outlined in **Figure 4**. The corresponding background trips are outlined in **Figure 5**.

Transportation Impact studies were available for the 157 Cross Avenue and Olde Oakville Market Place background developments. Site traffic volumes from these transportation studies were applied directly to the future background scenario under all study horizons. Given study intersections are inconsistent between the background transportation studies and this study, movements at several study intersections were estimated based on anticipated routings and the trip distribution used for site traffic in **Section 5.3**. **Figures 6 and 7** outline the future background traffic volumes for the Olde Oakville Market Place and 157 Cross Avenue background developments, respectively. Study excerpts are included in **Appendix H.**

The 320 Davis Road background trips were implied based on the traffic counts taken at the South Service Road East and Davis Road intersection (**Section 3.6** includes details on traffic data). Movements entering and exiting the west approach of the intersection were assumed to be entirely attributable to the 320 Davis Road site. Though a future building expansion is planned for the site, as confirmed by Town staff, it is expected that trip generation will remain similar in the future compared to the current condition. Given the west leg of the intersection is assumed in this study to be replaced by a QEW eastbound off-ramp in the 2035 horizon year, the traffic from this background development was assumed to be serviced in the 2035 scenarios by an access located approximately 20m south of the current location. Appropriately, the background development traffic was assigned accordingly to accommodate the new road network configuration in the 2035 horizon year.

4.4 Planned Transportation Improvements

Several relevant planning documents were reviewed to understand the anticipated future transportation network improvements in the vicinity of the subject site.

Figure 7.2 of the Halton Region Transportation Master Plan (2031), "The Road to Change", identifies a conversion of the existing six vehicle travel lane configuration of Trafalgar Road to a four travel lanes plus two high-occupancy vehicle (HOV) lanes configuration to accommodate a future bus rapid transit (BRT) line along Trafalgar Road. However, as confirmed with the Region, given the timing of this

improvement is currently unknown, the existing lane configurations were retained for all future scenarios analyzed herein.

Significant reconfiguring of the transportation network is planned in Midtown Oakville as part of the future planned intensification of the area. Such improvements are described in the Midtown Oakville EA (2014) and are further reflected in Schedule L.3 of "Liveable Oakville", the Town's Official Plan (excerpts included in **Appendix H**). As previously discussed in **Section 2.3**, given the realignment of Cross Avenue and QEW EB off-ramp connection to Cross Avenue as defined in the MOCEA would render the site undevelopable, an alternative analysis approach was pursued. The existing lane configurations at the intersections along Trafalgar Road are preserved for the future horizons. As established in the terms of reference correspondence, a QEW eastbound off-ramp is included in the 2035 horizon year analysis in place of the existing Davis Road west approach. Traffic volumes for the off-ramp were projected using the methodology in the MOCEA Traffic Analysis by comparing the do nothing scenario volumes to the scenario with the new QEW eastbound off-ramp connection to South Service Road. Based on the results of the signal warrants analysis in **Section 6.2** and the MOCEA findings, the intersection was evaluated under both stop control and traffic signals. Refer to Midtown Oakville EA Traffic Analysis excerpts in **Appendix C**.

Further, neither the future HOV lanes on Trafalgar Road nor the subject MOCEA improvements noted above are included in the current capital works improvements (2018-2027).

As part of the GO Expansion program being undertaken by Metrolinx, the Lakeshore West GO Transit line is planned to receive more frequent and faster transit service. Based on the GO Expansion Full Business Case (November 2018), the Oakville GO Station is expected to receive transit frequencies of approximately eight (8) trains per hour per direction during both the peak and off-peak periods. These improvements are expected to significantly increase the attractiveness of the transit transportation mode near the subject site. Refer to **Appendix H** for excerpts.

Finally, there are numerous active transportation improvements reflected in Maps 6 and 7 of the Town's Active Transportation Plan update (2017). The active transportation improvements listed in the plan in the vicinity of the subject site include active transportation crossings across the QEW adjacent and near to Trafalgar Road, a new in-boulevard trail / buffered bike lane along Cornwall Road and a new sidewalk along the North Service Road west of Trafalgar Road. These new active transportation routes are expected to increase the attractiveness of the active transportation modes to and from the subject site.

4.5 Intersection Operations

The future background intersection operations at the study intersections were analyzed using the 2025, 2030, and 2035 future background traffic volumes illustrated in **Figures 8, 9, and 10** respectively. Level of Service definitions are provided in **Appendix F.** Detailed capacity analysis worksheets are included in **Appendix G**.

Tables 11, 12 and 13 outline the 2025, 2030, and 2035 future background traffic operations.

Table 11: 2025 Future Background Traffic Operations

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Trafalgar Road and QEW WB ramps / North Service Road E.	Signal	A.M.	C	21.2s	**0.93 (SBR[4])**	None
		P.M.	C	23.2s	**0.95 (SBR[4])**	None
Trafalgar Road and QEW EB ramps	Signal	A.M.	C	23.5s	**0.89 (EBR)** **0.86 (SBT)**	None
		P.M.	C	26.2s	**0.81 (EBL)**	None
Trafalgar Road and South Service Road East / Cross Avenue	Signal	A.M.	D	39.0s	0.75 (EBL)	88.5m > 55.0m (SBL)
		P.M.	D	35.1s	0.85 (EBL)	166.1m > 130.0m (EBL) 78.9m > 55.0m (SBL)
Trafalgar Road and Cornwall Road	Signal	A.M.	C	34.2s	0.82 (SBL)	103.6m > 85.0m (EBL1) 112.2m > 105.0m (EBL2)
		P.M.	D	39.1s	0.81 (SBL)	108.7m > 85.0m (EBL1) 115.4m > 105.0m (EBL2)
South Service Road East and Davis Road	Stop (Minor)	A.M.	B	10.7s	0.06 (NB)	None
		P.M.	B	11.5s	0.08 (SB)	None
Davis Road and Site Access	Stop (Minor)	A.M.	A	8.4s	0.01 (EB)	None
		P.M.	A	8.4s	0.01 (SB)	None

Note 1: The Level of Service of a signalized intersection is based on the average control delay per vehicle (Synchro/ICU). The Level of Service of a stop-controlled intersection is based on the delay associated with the critical minor road approach (HCM2000).

*Note 2: The critical v/c ratio is considered to be the maximum v/c ratio for movements at the intersection where the maximum v/c ratio does not exceed the critical thresholds identified in **Section 3.7.2**. All v/c ratios that exceed the critical thresholds outlined in are bolded.*

Note 3: The 95th percentile queue lengths were derived from SimTraffic reports using 15-minute seeding, 60-minute simulation and an average of 5 runs. Queues which exceed the designated storage length of the turn lane but can be accommodated by a centre turn lane were not documented in this table.

Note 4: SBR – Refers to southbound movement to QEW WB on-ramp.

Table 12: 2030 Future Background Traffic Operations

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]

		P.M.	A	10.0s	0.12 (SB)	None
Davis Road and Site Access	Stop (Minor)	A.M.	A	8.4s	0.01 (EB)	None
		P.M.	A	8.4s	0.01 (SB)	None

Ditto Notes Table 11.

Of the scenarios analyzed, the 2035 horizon year generally represents the most constrained operational scenario for both the a.m. and p.m. peak hours. Unless otherwise noted, operations during 2025 and 2030 future background conditions are projected to be similar or better compared to 2035 future background conditions.

Except for the Trafalgar Road and QEW EB ramp which operates at a LOS "E" in the p.m. peak hour, all the study intersections operates at a LOS "D" or better during the peak hours.

As presented in **Table 13**, the following study intersections are forecast to have some movements operate near or at capacity under 2035 future background conditions:

- Trafalgar Road and QEW WB on/off-ramps / North Service Road
- Trafalgar Road and QEW EB on/off-ramps
- Trafalgar Road and South Service Road East / Cross Avenue
- Trafalgar Road and Cornwall Road

The noted study intersections are forecast to have some movements exceeding critical volume-to-capacity thresholds identified in **Section 3.7.2**, and a couple turn queues occasionally exceed the turn storage lanes into the taper and adjacent travel lane during the peak hours. These findings are consistent with previous traffic studies such as the MOCEA and the Olde Oakville Transportation Study. It is noted that forecasted issues can partly be attributed to the exponential background traffic volume growth projection applied along Trafalgar Road, Cornwall Road, and the MTO ramps over a thirteen year period to the ultimate 2035 horizon. Therefore, though it is expected that intersection operations will be constrained during the peak hours in the future horizons, forecasted operational issues may be overstated herein. Nevertheless, it is recommended that these study intersections be monitored for operational issues and the signal timing plans be revised as required to accommodate future traffic growth.

Under the 2030 future background scenario, the study intersection of Trafalgar Road and QEW EB on/off-ramps is projected to operate at a LOS "D" during the peak hours, with volume-to-capacity ratios above one for a few movements in the a.m. peak hour. Consideration should be given to optimizing the timing plans at the intersection in the 2030 horizon. The planned QEW EB-off ramp to South Service Road East was implemented for the 2035 horizon scenario. Intersection operations in the a.m. peak hour are expected to improve slightly under this scenario when compared to the corresponding 2030 scenario due to this planned improvement. The p.m. peak hour operations are expected to deteriorate between 2030 and 2035 even with the implementation of the planned QEW EB South Service Road East off-ramp. Even if the QEW EB off-ramp to South Service Road East is implemented, it is recommended the MTO explore adding a right-turn storage lane to the QEW eastbound off-ramp connection to Trafalgar Road in future if traffic volumes follow the pattern forecasted by the MOCEA for this scenario.

Under the 2035 future background scenario, the eastbound left-turn movement at the Cornwall Road and Trafalgar Road intersection is projected to be constrained. Similar to existing conditions, the 95th percentile eastbound left-turn queueing results suggests that vehicles may queue beyond the storage lanes into the adjacent through lanes and potentially block the Oakville GO Station parkade access connection to the Cornwall Road west approach during the peak hours. As recommend under existing conditions, the Region should monitor this intersection and consider timing plan coordination along Cornwall Road (if not already so), timing plan adjustments and additional regulatory signage (e.g., do not block intersection) to limit operational and potential safety issues at the adjacent upstream intersections on Cornwall Road.

The South Service Road East and Davis Road unsignalized study intersection is projected to operate at a LOS "B" or better during the peak hours under the 2025 and 2030 horizon years.

Under the 2035 horizon year, the west approach of the South Service Road East and Davis Road intersection was replaced by the planned QEW EB off-ramp. Traffic operations are expected to be adequate under both stop control and traffic signal control. A LOS "C" or better and a LOS "B" or better is forecast for the intersection under stop control and traffic signal control, respectively, during the peak hours. Given the existing Davis Road west approach services the 320 Davis Road background development, a new access connection was assumed for this site approximately 20m

south of the South Service Road East and Davis Road / QEW EB off-ramp intersection. The 320 Davis Road access connection to South Service Road East is projected to operate efficiently in the 2035 horizon, at a LOS "B" or better during the a.m. and p.m. peak hours.

Overall, the boundary road network is expected to operate satisfactorily under all future background scenarios analyzed, however, several improvement opportunities have been identified that would lead to safer and more acceptable traffic operations to accommodate future traffic growth.

5.0 Site Generated Traffic

The proposed development will result in additional vehicles on the boundary road network that would otherwise not exist. The proposed development will also result in additional turning movements at the study intersections. This section outlines the methodology and results of forecasting future inbound and outbound trips attributable to the proposed development under the various analysis scenarios, including existing conditions, future background and future total, along with under the various study horizon years.

5.1 Existing Site Trip Generation and Assignment

As discussed in **Section 3.6**, vehicle trip generation was conducted for the existing site for the purposes of conducting traffic analysis at the site access connection to Davis Road. The trip generation for the existing site is summarized in **Table 14** below.

Table 14: Existing Site Trip Generation

Existing Site Trip Generation						
ITE Land Use Category	GFA (ft^2)	Setting	Peak Hour	Trips Generated		
				Inbound	Outbound	Total
LUC 712 "Small Office Building"	7,900 ft^2	General Urban / Suburban	A.M.	11	2	13
			P.M.	6	11	17

The existing site is expected to generate approximately 13 and 17 two-way vehicle trips in the a.m. and p.m. peak hours, respectively. These trips were included within the existing condition and future background analysis scenario, and were replaced the future total scenario by the proposed development trips.

Given that Davis Road is a dead-end street, all inbound vehicle trips at the intersection of Davis Road and site access were assigned to the eastbound left-turn movement, while all outbound vehicle trips were assigned to the southbound right-turn movement. The turning movement counts at the remaining study intersections are expected to fully capture existing vehicle trips from the site. As such, no other vehicle additions attributable to the existing land use were made at the study intersections during the existing condition and future background scenarios.

5.2 Future Site Trip Generation

Future site trip generation forecasts for the proposed development were performed per the site statistics noted on the latest site plan (dated September 14, 2022, included in **Appendix A**). Trip generation was projected by transportation mode and for each of the horizon years analyzed herein.

5.2.1. ITE Trip Generation Rates

The ITE Trip Generation Manual, 11th Edition, was used to derive trip estimates for the proposed development. The ITE Trip Generation Manual is a compendium of industry collected trip generation data across North America for a variety of land uses and is used industry-wide as a source for trip generation forecasts.

The subject site is located within the Midtown Oakville Secondary Plan Area, which is a designated Urban Growth Centre per the Growth Plan for the Greater Golden Horseshoe (2020). Significant urbanization as a result of development is expected in the coming years. Therefore, while a setting of "General Urban/Suburban" would likely be most appropriate given the current nature of the area surrounding the site, the "Dense Multi-Use Urban" setting is likely more reflective of the future conditions. Therefore, a setting of "Dense Multi-Use Urban" was applied for the proposed development trip generation forecast. For land-use codes without sufficient data in the "Dense Multi-Use Urban" setting option, the "General Urban/Suburban" setting was applied instead.

The following Land Use Categories (LUC) were applied to the proposed mixed-use development:

- LUC 222 "Multifamily Housing (High Rise)" was applied to the 388 apartment dwelling units.
- LUC 710 "General Office Building" was applied to the four (4) office units.
- LUC 822 "Strip Retail Plaza (<40k)" was applied to the five (5) ground floor retail units.
- LUC 932 "High-Turnover (Sit-Down) Restaurant" was applied to the restaurant commercial unit.

Land Use Subcategories depending on proximity (within half a mile) to a Rail Transit Station were available for Land Use Codes 222 and 710. Given the site is located less than half a mile away from Oakville GO Station, the "Close to Rail Transit" land use subcategory was used herein for the applicable land use categories.

Given the lack of person trip generation rates available for several land use categories, ITE vehicle trip generation was recorded as the first step of the trip generation process. The ITE trip generation forecasts for the proposed development are outlined in **Table 15** below.

Table 15: ITE Vehicle Trip Generation

ITE Land Use Category	Independent Variable	Setting	Peak Hour	Trips Generated		
				Total	Inbound	Outbound
LUC 222 "Multifamily Housing (High Rise)"	388 Dwelling Units	Dense Multi-Use Urban	A.M.	85	9	76
			P.M.	74	51	23
LUC 710 "General Office Building"	15,827 ft² GFA	Dense Multi-Use Urban	A.M.	13	11	2
			P.M.	14	2	12
LUC 822 "Strip Retail Plaza (<40k)"	5,032 ft² GFA	General Urban / Suburban	A.M.	12	7	5
			P.M.	34	17	17
LUC 932 "High Turnover (Sit-Down) Restaurant"	2,305 ft² GFA	General Urban / Suburban	A.M.	22	12	10
			P.M.	21	13	8
Total Development Vehicle Trips			A.M.	132	39	93
			P.M.	143	83	60

Therefore, the ITE Trip Generation rates forecast 132 and 143 vehicle trips attributable to the proposed development in the a.m. and p.m. peak hours.

5.2.2. Internal Trip Capture

Given the proposed development is mixed-use in nature, internal trip capture between the proposed retail, office, and residential land uses is expected.

Therefore, the internal trip capture of the proposed development was forecasted. The forecast was conducted in accordance with Section 6.5 of the ITE Trip Generation Handbook, 3rd Edition, "Process for Estimating Mixed-Use Trip Generation". The vehicle trips in **Section 5.2.1** for each land use were used along with the unconstrained internal person trip capture rates listed in Tables 6.1 and 6.2 of the ITE Trip Generation Handbook as inputs for the internal trip capture projection. Given the land uses are all located within the same building, no proximity adjustment factors were applied.

Table 16 summarizes the internal trip capture projections, along with the net external person trips from the proposed development.

Table 16: Internal Trip Capture Projection

Land Use	Peak Hour	External Vehicle Trips			Internal Trip Capture	
		Total	Inbound	Outbound	Total	Capture Rate
Residential	A.M.	82	9	73	3	4%
	P.M.	64	46	18	10	14%
Office	A.M.	9	9	0	4	31%
	P.M.	12	1	11	2	14%
Retail	A.M.	8	4	4	4	33%
	P.M.	20	11	9	14	42%
Restaurant	A.M.	15	8	7	7	32%
	P.M.	11	7	4	10	48%
Combined Development	A.M.	114	30	84	18	14%
	P.M.	107	65	42	36	25%

It is expected based on the results of the internal trip projections that 14% and 25% of the original vehicle trips forecasted by the ITE Trip Generation Manual will be captured by the internal land uses of the site during the a.m. and p.m. peak hours, respectively.

Appendix I includes the detailed internal trip capture analysis.

5.2.3. Mode Split

As advised through the Terms of Reference correspondence, the Region of Halton requires a development forecast of the number of person trips generated by the proposed development, and a breakdown of trips generated by travel mode. Several sources of information were reviewed to determine suitable mode splits to apply for trip generation purposes for the proposed development.

The Halton Region Transportation Master Plan (TMP) identifies a travel demand mode split forecast of 72% for vehicle transportation, 20% for transit, 5% for active transportation, and 3% for travel demand management under a 2031 horizon year. Furthermore, the plan projects increases in transit mode share from the current situation, with a forecast of 10%, 15%, and 20% in transit mode split in 2021, 2026, and 2031, respectively.

The Town of Oakville's "Switching Gears" Transportation Master Plan evaluated various transportation mode splits to inform road network improvements for the 2031 horizon. Scenario D was recommended as the preferred interim solution to accommodate transportation demands. The Town preferred Scenario D mode split forecast identifies a 2031 mode share of 76% for vehicle transportation, 12% for transit, 6% for active transportation, and 6% for travel demand management.

Mode split of the current situation was additionally reviewed using Transportation Tomorrow Survey (TTS) data. TTS is a comprehensive survey of transportation characteristics of households in the Greater Toronto Area (GTA) and surrounding areas.

Mode split was calculated using 2016 survey data for all trips attributable to the Region of Halton, the Town of Oakville, and the 2006 GTA Zone 4014. The subject site is located within 2006 GTA Zone 4014, which approximately covers the entirety of the Midtown Oakville Growth Area. **Table 17** outlines the current mode splits in the Region of Halton, the Town of Oakville, and the Midtown Oakville Growth Area. Refer to **Appendix J** for TTS query data.

Table 17: Existing Modal Split (Transportation Tomorrow Survey)

	Region of Halton	Town of Oakville	Midtown Oakville
Vehicle Transportation	74%	72%	83%
Transit	9%	11%	6%
Active Transportation	6%	6%	2%
TDM (Carpooling Trips)	11%	11%	9%
Total	100%	100%	100%

As discussed in **Section 4.4**, there are significant transit improvements planned for future implementation in the vicinity of the subject site. These improvements include decreased headways and travel times on the Lakeshore West GO Rail Line as part of GO Expansion, along with enhanced transit within the Town of Oakville proper, including a new bus rapid transit service along Trafalgar Road. These improvements are expected to further promote and increase transit use the in the area and at the proposed development.

Based on the transit mode split investigative review and recommendations of the Region via the terms of reference correspondence, the transit mode split shown below in **Table 18** was used in the study herein for the purposes of trip generation forecasts by travel mode and person trip generation.

Table 18: Analysis Mode Split

	2022 (Existing Year)	2025 (Buildout Year)	2030 (5-Year Horizon)	2035 (10-Year Horizon)
Vehicle Transportation	81%	78%	72%	72%
Transit	11%	14%	20%	20%
Active Transportation	5%	5%	5%	5%
TDM (Carpooling Trips)	3%	3%	3%	3%
Total	100%	100%	100%	100%

It is noted that the TDM mode split of 3% was assigned to the TDM transportation mode as this is the highest rate permissible from Halton Region. Based on data from the Transportation Tomorrow Survey outlined in **Table 17**, carpooling rates are currently much higher, with a mode split at approximately 10%. It is expected the TDM mode split will remain similar in the future horizons. Therefore, the expectation is for the vehicle transportation mode split to be approximately 73%, 65% and 65% for the 2025, 2030 and 2035 horizon years, respectively. The expected vehicle mode split of 65% was used for the purpose of projecting total person trip generation. However, a 3% mode split was retained for the estimation by Trip Generation by Travel Mode in **Section 5.2.5**. Thus, vehicle trips forecasted herein are likely a slight overestimate. This results in a more conservative assessment of the traffic operational impact of the proposed development on the boundary road network.

5.2.4. Person Trip Generation

The total person trips generated by the proposed development were forecasted based on the vehicle trip generation in **Section 5.2.2** and the mode split in **Section 5.2.3.** The ITE Trip Generation forecast is assumed to reflect the existing mode split for vehicle trips. Therefore, to determine person trip generation forecasts, the ITE vehicle trip generation were divided by the existing vehicle mode split of 81% (as discussed in **Section 5.2.4**).

The resulting person trip generation forecast is summarized below in **Table 19**.

Table 19: Site Person Trip Generation

ITE Land Use Category	Peak Hour	Trips Generated		
		Total	Inbound	Outbound
Residential	A.M.	101	11	90
	P.M.	79	57	22
Office	A.M.	11	11	0
	P.M.	15	1	14
Retail	A.M.	10	5	5
	P.M.	25	14	11
Restaurant	A.M.	19	10	9
	P.M.	14	9	5
Total Development Person Trips	**A.M.**	**141**	**37**	**104**
	P.M.	**133**	**81**	**52**

As shown in **Table 19**, the proposed development is expected to generate 141 and 133 person trips in the a.m. and p.m. peak hours, respectively.

5.2.5. Trip Generation by Travel Mode

To determine the final trip generation estimates by travel mode, the trip generation mode split identified in **Section 5.2.3** was applied to the net external person trips outlined in **Section 5.2.4**. **Table 20** outlines the trip generation forecast for the 2025 horizon year, and **Table 21** outlines the trip generation for the 2030 and 2035 horizon year.

Table 20: Site Trip Generation (2025)

Transportation Mode	A.M. Peak Hour			P.M. Peak Hour		
	Total	Inbound	Outbound	Total	Inbound	Outbound
Vehicle Transportation	110	29	81	104	63	41
Transit	20	5	15	18	11	7
Active Transportation	7	2	5	7	4	3
TDM (Carpooling Trips)	4	1	3	4	2	2
External Person Trips Total	**141**	**37**	**104**	**133**	**80**	**53**

Table 21: Site Trip Generation (2030/2035)

Transportation Mode	A.M. Peak Hour			P.M. Peak Hour		
	Total	Inbound	Outbound	Total	Inbound	Outbound
Vehicle Transportation	102	27	75	95	58	37
Transit	28	7	21	27	16	11
Active Transportation	7	2	5	7	4	3
TDM (Carpooling Trips)	4	1	3	4	2	2
External Person Trips Total	**141**	**37**	**104**	**133**	**80**	**53**

5.3 Trip Distribution

The vehicle trips generated by the proposed development were distributed to the boundary road network based on 2016 Transportation Tomorrow Survey (TTS) data. TTS is a comprehensive survey of transportation characteristics of households in the Greater Toronto Area (GTA) and surrounding areas.

For the proposed development, TTS results were filtered to vehicle trips entering and exiting 2006 GTA Zone 4014 during the weekday a.m. and p.m. peak periods. The zone approximately represents the entirety of the Midtown Oakville Growth Area.

From this query, trip destinations were determined, and percentage of trips assigned to each destination was accounted for. Trips were assumed to travel to and from their destination points based on the most convenient route. The resultant trip distribution is outlined in **Table 22.**

Table 22: Trip Distribution

Arriving From / Departing To	Percentage
Queen Elizabeth Way (West)	22%
Queen Elizabeth Way (East)	21%
Trafalgar Road (North)	33%
Trafalgar Road (South)	2%
Cornwall Road (West)	11%
Cornwall Road (East)	2%
Cross Avenue (West)	4%
South Service Road East (East)	5%
Total	100%

Figure 11 outlines the trip distribution used for the 2025 and 2030 analysis scenarios. **Figure 12** outlines the trip distribution for the 2035 analysis period. **Appendix J** contains the TTS data and detailed trip distribution calculations.

5.4 Trip Assignment

The trip distribution outlined in **Section 5.3** was applied to the site vehicle trip generation to calculate the trip assignment. Trips were assumed to travel to and from their destination points based on the most convenient route.

Figures 13, 14 and 15 outline the trip assignment for the 2025, 2030, and 2035 horizon years, respectively.

6.0 Future Total Conditions

6.1 Basis of Assessment

To determine future total traffic volumes for each of the future horizon years, the site generated traffic volumes for the horizon year were added to the corresponding future background traffic volumes. The 2025 future total traffic volumes, calculated by summing **Figures 8 and 13**, are provided as **Figure 16**. The 2030 future total traffic volumes, calculated by summing **Figures 9 and 14**, are provided as **Figure 17**. Finally, the 2035 future total traffic volumes, calculated by summing **Figures 10 and 15**, are provided as **Figure 18**.

6.2 Signal Warrant Analysis

A signal warrant analysis was conducted for the intersection of South Service Road East and Davis Road. The analysis followed the procedures specified in Chapter 4 of the "Ontario Traffic Manual – Book 12", March 2012. Justifications 1 (Minimum Vehicular Volume), 2 (Delay to Cross Traffic), 3 (Combination of Justifications 1 and 2), and 4 (4-Hour Volume) were selected as the most appropriate warrants to assess.

The average hour volume was determined using the following formula from OTM Book 12:

AHV = (amPHV + pmPHV) / 4

Where;

AHV = average hour volume
PHV = peak hour volume

Table 23 outlines the results of the signal warrant analysis. **Appendix K** contains the signal warrant sheets.

Table 23: Signal Warrant Analysis Results

Location	Operating Environment	Horizon Year	Number of lanes on major road	Traffic Signals Warranted?
South Service Road East and Davis Road	Urban	2030 Future Total	Two	No
	Urban	2035 Future Total	Two	No

The results of the signal warrant analysis indicate that traffic signals are not warranted at the Davis Road connection to South Service Road East under any of the study horizons. However, the new QEW EB off-ramp connection to South Services Road is planned to be signalized according to the MOCEA, therefore, the intersection was modelled under both the stop-control (minor street) and signalization configurations in the 2035 horizon.

Given that the only access to the site is through this intersection, signal warrants were not checked at the site access connection to Davis Road as the intersection will possess fewer traffic movements than at the South Service Road and Davis Road intersection.

6.3 Intersection Operations

The future total intersection operations at the study intersections were analyzed using the 2025, 2030, and 2035 future total traffic volumes illustrated in **Figures 16, 17, and 18** respectively. Detailed capacity analysis worksheets are included in **Appendix G**.

Tables 24, 25 and 26 outline the 2025, 2030, and 2035 future total traffic operations.

Table 24: 2025 Future Total Traffic Operations

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Trafalgar Road and QEW WB ramps / North Service Road E.	Signal	A.M.	C	21.1s	**0.93 (SBR[4])**	None
		P.M.	C	23.9s	**0.95 (SBR[4])**	None
Trafalgar Road and QEW EB ramps	Signal	A.M.	C	23.8s	**0.90 (EBR)** **0.87 (SBT)**	None
		P.M.	C	28.1s	**0.82 (EBL)**	None
Trafalgar Road and South Service Road East / Cross Avenue	Signal	A.M.	D	38.7s	0.75 (EBL)	90.1m > 55.0m (SBL)
		P.M.	D	35.6s	0.85 (EBL)	174.2m > 130.0m (EBL) 79.3m > 55.0m (SBL)
Trafalgar Road and Cornwall Road	Signal	A.M.	C	34.3s	0.81 (SBL)	86.7m > 85.0m (EBL1)
		P.M.	D	39.3s	0.82 (SBL)	108.9m > 85.0m (EBL1) 119.6m > 105.0m (EBL2)
South Service Road East and Davis Road	Stop (Minor)	A.M.	B	12.3s	0.18 (WB)	None
		P.M.	B	12.9s	0.12 (WB)	None
Davis Road and Site Access	Stop (Minor)	A.M.	A	8.7s	0.08 (SB)	None
		P.M.	A	8.5s	0.04 (SB)	None

Note 1: The Level of Service of a signalized intersection is based on the average control delay per vehicle (Synchro/ICU). The Level of Service of a stop-controlled intersection is based on the delay associated with the critical minor road approach (HCM2000).

*Note 2: The critical v/c ratio is considered to be the maximum v/c ratio for movements at the intersection where the maximum v/c ratio does not exceed the critical thresholds identified in **Section 3.7.2**. All v/c ratios that exceed the critical thresholds outlined in are bolded.*

Note 3: The 95th percentile queue lengths were derived from SimTraffic reports using 15-minute seeding, 60-minute simulation and an average of 5 runs. Queues which exceed the designated storage length of the turn lane but can be accommodated by a centre turn lane were not documented in this table.

Table 25: 2030 Future Total Traffic Operations

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Trafalgar Road and QEW WB ramps / North Service Road E.	Signal	A.M.	C	24.8s	**1.03 (SBR[4])**	None
		P.M.	C	31.7s	**1.07 (SBR[4])** **0.90 (NBT)** **0.79 (WBL)** **0.79 (WBT)**	None
Trafalgar Road and QEW EB ramps	Signal	A.M.	C	29.1s	**0.99 (EBR)** **0.97 (SBT)**	202.9m > 175.0m (EBL)
		P.M.	C	30.0s	**0.86 (NBT)** **0.87 (EBL)** **0.83 (EBR)**	204.4m > 175.0m (EBL)
Trafalgar Road and South Service Road East / Cross Avenue	Signal	A.M.	D	44.9s	**0.85 (SBT)**	170.5m > 130.0m (EBL) 89.5m > 55.0m (SBL)
		P.M.	D	37.9s	0.89 (EBL)	166.2m > 130.0m (EBL) 90.6m > 55.0m (SBL)
Trafalgar Road and Cornwall Road	Signal	A.M.	C	34.1s	0.85 (SBL)	107.1m > 85.0m (EBL1) 111.6m > 105.0m (EBL2) 101.4m > 85.0m (WBR)
		P.M.	D	40.4s	0.88 (EBL)	103.6m > 85.0m (EBL1) 110.6m > 105.0m (EBL2)97.8m > 90.0m (SBL1)
South Service Road East and Davis Road	Stop (Minor)	A.M.	B	12.5s	0.18 (WB)	None
		P.M.	B	12.9s	0.11 (WB)	None
Davis Road and Site Access	Stop (Minor)	A.M.	A	8.7s	0.08 (SB)	None
		P.M.	A	8.5s	0.04 (SB)	None

Ditto Notes Table 24.

Table 26: 2035 Future Total Traffic Operations

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Trafalgar Road and QEW WB ramps / North Service Road E.	Signal	A.M.	C	32.1s	**1.14 (SBR[4])**	None
		P.M.	D	47.6s	**1.20 (SBR[4])** **1.00 (NBT)** **0.82 (WBT)** **0.82 (WBL)**	78.4m > 60.0m (WBR)
Trafalgar Road and QEW EB ramps	Signal	A.M.	C	21.5s	**0.91 (SBT)** **0.88 (EBL)** **0.81 (EBR)**	197.6m > 175.0m (EBL)
		P.M.	E	58.7s	**1.10 (EBR)** **1.06 (NBT)**	208.6m > 175.0m (EBL)
Trafalgar Road and South Service Road East / Cross Avenue	Signal	A.M.	D	45.7s	**0.90 (SBT)**	170.1m > 130.0m (EBL) 89.0m > 55.0m (SBL)
		P.M.	D	38.4s	0.91 (EBL) **0.89 (SBT)** **0.86 (NBT)**	168.8m > 130.0m (EBL) 87.0m > 55.0m (SBL)
Trafalgar Road and Cornwall Road	Signal	A.M.	D	35.7s	0.89 (SBL)	105.5m > 85.0m (EBL1) 106.4m > 105.0m (EBL2) 115.9m > 85.0m (WBR)
		P.M.	D	42.7s	**0.96 (EBL)**	97.3m > 85.0m (EBL1) 106.1m > 105.0m (EBL2) 100.5m > 85.0m (WBR) 101.3m > 90.0m (SBL1)
South Service Road East and Davis Road	Signal	A.M.	B	17.0s	**0.82 (EB**)	None
		P.M.	A	6.1s	0.39 (EB)	None
	Stop (Minor)	A.M.	C	24.9s	**0.79 (EB)**	None
		P.M.	B	13.9s	0.19 (EB)	None
South Service Road East and 320 Davis Road Access	Stop (Minor)	A.M.	B	11.2s	0.19 (SB)	None
		P.M.	B	10.3s	0.13 (SB)	None
Davis Road and Site Access	Stop (Minor)	A.M.	A	8.7s	0.08 (SB)	None
		P.M.	A	8.5s	0.04 (SB)	None

Ditto Notes Table 24.

All the study intersections are forecast to operate similarly to their respective future background conditions. Except for the Trafalgar Road and QEW EB ramp which operates at a LOS "E" in the p.m. peak hour, all the study intersections are projected to operate at a LOS "D" or better during the peak hours.

The noted operational issues and recommended potential mitigation measures under the future background apply to the future total conditions.

Overall, the boundary road network is expected to operate adequately into the 2035 ultimate horizon year. The addition of site generated traffic to the boundary road network is not expected to materially impact traffic operations. Therefore, the proposed development is supportable from a traffic operations perspective.

7.0 Safety Review

This section reviews transportation safety of the proposed development. The purpose of the safety review is to identify any safety deficiencies and to identify how the development proposes to maximize safety for all road users. The safety review assesses spacing and sight lines at the access along with internal site circulation in the following subsections.

7.1 Access Spacing and Corner clearance

The development includes a site access connection to Davis Road. It is noted that the existing site maintains a site access in nearly the same location as the access proposed to serve the development as outlined in the site plan in **Appendix A**.

Access spacing was checked against the Transportation Association of Canada (TAC) Geometric Design Guide for Canadian Roads (GDGCR) requirements. Per Figure 8.8.2 of the manual, a minimum 15m separation distance is suggested for local roads. A separation to South Service Road East of more than 50m was measured. Further, the access is at least 4m away from the adjacent driveway access to the Oakville Auto Center, satisfying the driveway spacing requirements of the TAC GDGCR Figure 8.9.2. Therefore, the proposed site connection spacing satisfies the minimum suggested intersection spacing requirements per the TAC GDGCR.

7.2 Sight Distance Analysis

The available sightlines at the proposed Ninth Line connections were measured and compared to the standards set out in the TAC GDGCR. Sight distance was measured from the proposed site accesses using the following assumptions:

- A standard driver eye height of 1.08 metres for a passenger car, and
- A 4.4 metre setback from the approximate extension of the outer curb to represent a vehicle waiting to exit the site.

Intersection sight distance is calculated using equation 9.9.1 from the GDGCR as outlined below:

*ISD = 0.278 * V major * tg*

Where;
ISD = Intersection Sight Distance
V major = design speed of roadway (km/h)
tg = assumed time gap for vehicles to turn from stop onto roadway (s)

The design speed of a roadway in an urban environment is typically 10 km/h greater than the posted speed limit. Davis Road does not have a posted speed limit. As discussed in **Section 3.3**, a speed limit of 50 km/h was assumed for the roadway. Accordingly, a design speed of 60km/h was used for the evaluation of sight distance.

Table 27 outlines the sight distance analysis for the Davis Road site access.

Table 27: Sight Distance Analysis

Feature	Davis Road site access
Access Type	Full-Moves
Intersection Control	Stop (Minor Street)
Assumed Design Speed	60 km/h
Base Time Gap	7.5 s [1] Left-turn 6.5 s Right-turn
Grade of Roadway	Less than 3%
Horizontal Alignment of Roadway	Straight
Sight Distance Required	Left - 130m Right - 110m
Measured Sight Distance	Visibility of intersection (looking west) >150m (looking east)
Minimum Sight Distance Satisfied?	Left turn – Yes Right turn – Yes

Note 1: Time gap for left-turning vehicles from a stop onto a two-lane highway with no median and with a grade less than 3%. Value from Table 9.9.3 in the GDGCR.
Note 2: Sight distance values calculated from Intersection Sight Distance equation 9.9.1 in the GDGCR.

As outlined in **Table 27**, minimum sight distance requirements are satisfied at the site access connection to Davis Road. Therefore, the proposed development is supportable from a sight distance perspective.

7.3 Internal Site Circulation

Detailed vehicle turning diagrams have been provided to illustrate internal site circulation. Vehicle turning analysis was conducted for the most constrained vehicle profiles expected to navigate through the site: a standard pumper firetruck and a Region of Halton front-load garbage truck. Furthermore, vehicle turning analysis using passenger vehicles for the most constrained parking spaces and parking garage servicing routes were analyzed to ensure accessibility throughout the site.

Vehicle turning analysis indicates that there are no expected maneuverability constraints within the site. Refer to vehicle turning diagrams in **Appendix K**.

8.0 Transportation Demand Management

There are existing and planned Transportation Demand Management (TDM) opportunities in the Town of Oakville and near the site to encourage the use of non-auto transportation options, as outlined in **Section 3.4**, **Section 3.5**, and **Section 4.4**. The existing and future background improvements to the road, transit and active transportation networks are expected to reduce dependence on single occupancy vehicle trips.

Furthermore, there are site specific transportation demand management measures included as part of the proposed development that will promote the use of transit and active transportation modes. As shown in **Appendix A**, the Site Plan identifies internal pedestrian walkways which permit pedestrian

circulation within the site. Furthermore, the site proposes to include a sidewalk connecting along the north side of Davis Road to South Service Road East. This direct connection to the existing pedestrian network improves safety and convenience of pedestrian movement and access to the boundary roadway, transit and nearby land uses.

The site additionally proposes 400 bicycle parking spaces per the Site Plan in **Appendix A**. This bicycle parking supply is in excess of both the Town of Oakville Zoning By-Law No. 2014-014 and the Midtown Oakville Parking Strategy (2012) minimum bicycle parking requirements. Therefore, it is expected that the provision for additional bicycle parking spaces than the set out requirements will promote the cycling transportation mode and thereby reduce dependence on vehicle trips for shorter trips.

The outlined site specific TDM measures are expected to help the development capitalize on the existing and planned TDM opportunities in the area.

9.0 Parking Review

The combined 622 space vehicle parking supply for the proposed land uses satisfies the Town of Oakville's minimum parking requirements per the Town of Oakville Zoning By-Law No. 2014-014 as highlighted by the parking requirement calculation outlined in **Table 28**. The parking supply is 8% in surplus to the minimum requirements of the Town of Oakville. This level of overage or shortage is typically not associated with parking supply induced operations issues and should not impact active transportation goals for the site and area.

Table 28: Parking Review

By-Law Use	Number of Units / GFA	Minimum Parking Space Rate	Required Parking Spaces
Apartment Dwelling [1]	388[1]	1.0 spaces per dwelling unit where the unit has less than 75.0m^2 net floor area, otherwise, 1.5 spaces per dwelling	476 [2]
Retail Store	467 m^2	1.0 space per 18.0 m^2 net floor area	26
Business Office	1470 m^2	1.0 space per 35.0 m^2 net floor area	42
Restaurant	214m^2	1.0 space per 10.0 m^2 net floor area	22
Total Required Parking Spaces			566
Total Proposed Parking Spaces			622
Surplus/Deficit			+56

Note 1: 213 apartment units are less than 75.0m^2 net floor area, while the remaining 175 apartment units are larger than 75.0m^2.
Note 2: Per the By-law, 97 spaces out of the 476 should be provided as visit parking.

Further, the proposed barrier free accessible parking supply of 14 spaces satisfies the Town of Oakville Zoning By-Law requirement of 2+2% of the total number of provided parking spaces.

10.0 Public Information Session

A public information session was held on March 2, 2023 to introduce the development proposal to the public and obtain public input. The development proposal was presented and feedback was received from attendees of the session.

Several attendees at the public meeting were concerned about the existing traffic situation along Trafalgar Road and towards Downtown Oakville. Some attendees expressed their preference for the Midtown Oakville Class Environmental Assessment (MOCEA) eastbound QEW off-ramp underpass (at Trafalgar Road) to a realigned Cross Avenue to relieve traffic pressure on Trafalgar Road. The eastbound QEW off-ramp underpass will be referred to as the "underpass off-ramp" throughout this section.

In response to these concerns, a separate traffic analysis was conducted to accurately characterize the impacts on traffic with and without the underpass off-ramp.

Scenario 1 (MOCEA with underpass off-ramp): The traffic volumes from the MOCEA 2031 preferred scenario, which includes the potential underpass off-ramp, were used as the traffic volumes for the assessment of this scenario. Though the traffic projections from the MOCEA may no longer be necessarily representative of the future condition as there have been and continues to be significant changes in plans and policy for the area, these projections were deemed the most appropriate to use for assessment of the future option with the underpass in place.

Scenario 2 (MOCEA without underpass off-ramp): Traffic volumes for this scenario was established using the MOCEA traffic volumes as the initial baseline. Without the underpass off-ramp, it can be reasonably expected that the MOCEA traffic projected on the underpass off-ramp would instead use either the "buttonhook" QEW EB off-ramp onto Cross Avenue planned as part of the MOCEA, located just west of Royal Windsor Drive (herein referred to as the "buttonbook off-ramp"), or to the existing QEW EB off-ramp to Trafalgar Road. Given the exit point of the underpass off-ramp within Midtown Oakville (per the MOCEA), it is projected that in its absence, approximately 80% of the traffic would divert to the QEW buttonhook EB off-ramp to Cross Avenue, while 20% of the traffic would divert to the QEW EB off-ramp at Trafalgar Road. Further, for the 20% of traffic to the QEW EB off-ramp at Trafalgar Road, 25% of this traffic at the Trafalgar Road EB off-ramp terminal was assigned to turn left to travel northbound, while 75% of this traffic was assigned to travel southbound on Trafalgar Road. This estimated split for the diversions is assessed as reasonably reflective as a portion of the traffic projected on the underpass off-ramp would use the North-South Crossing to access lands on the north side of the QEW. However, most of the traffic projected on the underpass off-ramp would have been destined for the Midtown Oakville located south-east of Trafalgar Road/ QEW, and the buttonhook off-ramp is expected to be the more convenient route compared to the Trafalgar Road QEW EB off-ramp under future traffic volumes.

The focus of this assessment is on the Trafalgar Road interchange based on the community comments. However, it is noted that the additional traffic volumes are anticipated to be accommodated without issues at the planned buttonhook off-ramp to Cross Avenue, given the MOCEA projected traffic operations of LOS "B" or better at this location with under fifteen seconds of delay in both the 2031 a.m. and p.m. peak hours.

Figure 19 outlines a comparison of the traffic volumes at the Trafalgar Road and QEW EB off-ramp for the two scenarios herein (i.e., with and without the underpass off-ramp).

Aside the minor delay differences due to assessing the intersection of Trafalgar Road and QEW EB-off ramp in isolation, while the MOCEA performed a network analysis, the Synchro 11 analysis parameters used in the MOCEA were replicated for the analysis herein. Therefore, the analysis for the two scenarios herein are consistent with the MOCEA analysis methodology.

Table 29 outlines the results of the Synchro 11 operational analysis for the QEW EB off-ramp at Trafalgar Road under the two scenarios (i.e., with and without the underpass off-ramp). Scenario 2 with an additional off-ramp right-turn lane improvement to the Trafalgar Road interchange was also included in the Table, given the existing high right-turn volumes and expected higher future volumes for the movement as highlighted by the v/c ratios in the Table.

Table 29: Traffic Operations – QEW EB off-ramp at Trafalgar Road

Scenario	Peak Hour	Level of Service [1]	Control Delay	V/C ratios [2]
Scenario 1 MOCEA Volumes with underpass off-ramp	A.M.	D	53.3s	**1.01 (EBR)** **0.94 (SBT)** 0.87 (NBT) 0.30 (EBL)
	P.M.	C	24.9s	**0.82 (EBR)** 0.74 (NBT) 0.55 (EBL) 0.51 (SBT)
Scenario 2 MOCEA Volumes without underpass off-ramp	A.M.	E	77.4s	**1.06 (EBR)** **0.99 (SBT)** **0.92 (NBT)** 0.31 (EBL)
	P.M.	C	25.3s	**0.82 (EBR)** 0.74 (NBT) 0.55 (EBL) 0.52 (SBT)
Net Change	A.M.	-1 LOS	+24.1s	**+0.05 (EBR)** **+0.04 (SBT)** **+0.05 (NBT)** +0.01 (EBL)
	P.M.	No change	+0.4s	+0.01 (EBL)
Scenario 2 with an additional auxiliary right-turn lane improvement	A.M.	C	26.1s	**0.81 (EBR)** 0.67 (SBT) 0.62 (NBT) 0.41 (EBL)
	P.M.	C	20.6s	0.73 (EBL) 0.62 (NBT) 0.58 (EBR) 0.43 (SBT)

Note 1: The 2030 Future Total Traffic Analysis used a number of different analysis assumptions than the MOCEA, and should not be considered as representative or comparable to the MOCEA without underpass scenario.

The intersection of Trafalgar Road and QEW EB off-ramp is projected to operate without material change in level of service in the p.m. peak hours, with or without the underpass off-ramp. The intersection is however, expected to incur additional delays in the a.m. peak hour, at 24.1s of projected additional intersection delay for the scenario without the underpass off-ramp.

However, the projected p.m. peak hour operations in the 2031 horizon under both scenarios is typical for the peak commuter hours of a high volume major arterial and highway off-ramp intersection, operations are expected to be better during the rest of the day. Further, as highlighted, by the forecasted operations **(Table 29)** with the implementation of a second auxiliary right-turn lane, operations can be greatly improved in the future with the subject improvement without need for the MOCEA underpass off-ramp.

Given the findings of this analysis and similar to the findings under Section 6 of this study for the subject intersection, it is recommended that the MTO explore adding a second right-turn storage lane to the QEW eastbound off-ramp connection to Trafalgar Road in the future (ie. beyond 2030) if traffic volumes follow the pattern forecast by the MOCEA. Such an improvement would be significantly less complex and cost effective than the potential MOCEA underpass off-ramp improvement.

Appendix G contains the detailed capacity analysis reports for this assessment.

11.0 Conclusions & Recommendations

This study has assessed the transportation impacts of the proposed mixed-use development in the Town of Oakville, Region of Halton. The analyses herein regarding the proposed development has resulted in the following key findings:

- Overall, the study intersections are currently operating acceptably at a LOS "D" or better during the peak hours. A few movements are operating near capacity at the intersection of Trafalgar Road and QEW ramps. Similarly, the 95th queuing results indicate a couple auxiliary turn storage lanes may be exceeded during the peak hours at the Trafalgar Road intersections with Cornwall Road and South Service Road East / Cross Avenue.

- In the 2025 horizon year, the proposed development is forecast to generate 110 and 104 vehicle trips in the a.m. and p.m. peak hours, respectively. In the 2030 and 2035 horizon years, the proposed development is forecast to generate 102 and 95 vehicle trips in the a.m. and p.m. peak hours, respectively – consistent with the modal split projections from the Region.

- The ultimate horizon 2035 trip generation forecast projects 39 and 38 non-vehicular trips generated by the proposed development in the a.m. and p.m. peak hours, respectively.

- Analysis of future background traffic operations indicates that the study intersections along Trafalgar Road are expected to operate near capacity in the ultimate 2035 horizon with a few movements at the QEW ramp intersections operating above capacity. However, under all future background analysis scenarios, the boundary road network is forecast to operate at a LOS "D" or better during the peak hours, except at the Trafalgar Road and South Service Road East intersection, where operations are projected to be a LOS "E" during the critical p.m. peak hour. Several opportunities for operational improvements were identified in the future background and are included as part of the Study recommendations.

associated future background scenario at all study intersections. Under the ultimate 2035 horizon year analysis, the study intersections are forecast to operate at a LOS "D" or better during the peak hours, or the same as future background conditions. At the intersection of Trafalgar Road and QEW eastbound ramps, operations are projected to be LOS "E" during the critical p.m. peak hour, consistent with the 2035 future background conditions.

- The maximum control delay increment and volume-to-capacity ratio increase in the future total scenarios compared to the corresponding future background scenarios at any of the study intersections is forecast to be minimal, at 2.1s and 0.01, respectively. This indicates that site traffic does not materially impact traffic operations at the study intersections. Therefore, no external road improvements attributable to the proposed development are required.

- The available sight distance at the proposed site connection to Davis Road exceeds the minimum sight distance requirements set out in the Transportation Association of Canada (TAC) Geometric Design Guide for Canadian Roads (GDGCR), June 2017. Further, the site satisfies the minimum corner clearance and accessing spacing requirements per the TAC-GDGCR. Further, no expected maneuverability constraints within the site for waste collection or fire trucks are identified.

- In addition to the background active transportation and transit improvements expected in the vicinity of the subject site, the development proposal includes several site specific transportation demand management measures that are expected to reduce dependence on vehicle transportation:

    - The development proposal includes a sidewalk connection along the north side of Davis Road to South Service Road East. This direct connection to the existing pedestrian network improves safety and convenience of pedestrian movement and access to the boundary roadway, transit and nearby land uses.

    - The site proposes a bicycle parking supply of 400 spaces, which is in excess of both the Town of Oakville Zoning By-Law requirements and the Midtown Oakville Parking Strategy. This measure is expected to promote the bicycle transportation mode.

- The proposed parking supply of 622 spaces satisfies the Town of Oakville's Zoning By-Law No. 2014-014 minimum vehicle parking requirements. Additionally, the site provides the required barrier free accessible parking spaces.

- The parking supply is 8% in surplus to the minimum requirements of the Oakville Zoning By-Law, however, this level of overage is typically not associated with parking supply induced operations issues and should not impact active transportation goals for the site and area.

- Traffic related concerns were raised by some attendees of the 349 Davis Road development proposal Public Information Session conducted on March 2, 2023. Based on the traffic review in **Section 10.0** focused on these concerns, the Midtown Oakville area can be served adequately without the need for the QEW EB underpass off-ramp.

In addition, several recommendations have been identified based the findings and analysis of this study to support the future transportation conditions in the study area. It is recommended that:

- The MTO and Region explore opportunities including timing plan setup adjustments and or

turning movement prohibitions (as applicable) in the future to increase capacity for southbound right-turn traffic on Trafalgar Road entering the QEW WB on-ramp and North Service Road.

- At the intersection of Trafalgar Road and Cornwall Road, the Region and Town explore mitigation measures such as timing plan coordination along Cornwall Road (if not already), timing plan adjustments and additional regulatory signage (ex. do not block intersection) to limit operational and potential safety issues at the adjacent upstream intersections on Cornwall Road.

- The MTO explore adding a right-turn storage lane to the QEW eastbound off-ramp connection to Trafalgar Road in future (ie. beyond 2030) if traffic volumes follow the pattern forecast by the MOCEA.

- The remaining study intersections aside the proposed site access should be monitored by the Region and Town with timing plans adjusted in future for optimal operations as needed.

The analysis contained within this report was prepared using the Site Plan prepared by Studio Veronica Madonna Architect (dated September 14, 2022). Minor revisions to the site plan are not expected to affect the conclusions contained within this report.

In conclusion, the Official Plan Amendment and Zoning By-Law Amendment applications can be supported from a traffic operations perspective as the boundary road network can accommodate the increase in traffic volumes attributable to the proposed development at 349 Davis Road in the Town of Oakville.

Sincerely,

C.F. CROZIER & ASSOCIATES INC.

Subject: RE: FW: TIS&PJS Terms of Reference - 349 Davis Road, Oakville

Hi Liam;

Sorry for the delayed response. Comments were provided for the 1st submission for updating the TIS report.

The updates should include the following:

- A sensitivity analysis illustrating how this development would anticipate operational access with the proposed road network outlined in the approved Midtown EA proposed road-network. The MOCEA has a road going through the site, so it impossible to incorporate this request, hence the reason for maintaining the existing road network and assessing road improvement requirements to accommodate the development. Note that a road

network modification figure similar to attached was shared with the MOCEA review team for consideration in the Town Initiated Official Plan Amendment.

- Provide information of any proposed Active Transportation connectivity to this development. This as well as other TDM measures for the site is provided as part of Section 8 of the TIS.
- The parking justification study (this is a section that is to justify the shortfall/surplus and how it compares to the zoning bylaw and the surrounding area expectations. Noted, please check my other email for response to this.
- Turning Movement Plans (illustration of the turning movement templates of the anticipated vehicles access the development). Please refer to Appendix L of the TIS.
- Horizon years should be 5 and 10 years post build-out not post application. This is already the case in the TIS – assumed full buildout of 2025 plus 2030 and 2035 were analyzed and was confirmed in the terms. We can update the full build year if that seems too aggressive.

If you have any questions, please let me know.

Have a wonderful day 😊!

Aquisha Khan, **P. Eng.,**
Transportation Engineer, East Oakville
Transportation Planning Services,
Town of Oakville | P: 905-845-6601, Ext. 3236 | C: 289-952-9345 | www.oakville.ca

Subject: Re: FW: TIS&PJS Terms of Reference - 349 Davis Road, Oakville

Hi Aquisha,

CLS and Crozier are currently working on updating the TIS for the Town of Oakville; however, we wanted to confirm what additional information or revisions are required to be added to the TIS. From our understanding a TOR has been approved for the TIS, so, with that being the case, can you just confirm what updates, if any, need to be made to the TIS that would allow this report to be approved by the Town.

Best regards,

Liam Morgan

Follow Up Flag: Follow up
Flag Status: Flagged

Hi Aidan,

Thank you for the terms of reference for your transportation study.

I have reviewed the terms of reference (below) and have the following transportation planning comments from Halton.

For the Transit mode splits, as well as TDM & Active Transportation assumptions, please use:

Halton's Transportation Master Plan 2011 utilizes a transit mode split of 10% for 2021, 15% for 2026 and 20% for 2031. Assumption of travel via other modes (active transportation i.e.: walk, cycle) should utilize a 5% mode split for 2026. Transportation Demand Management (TDM) assumptions of 3% for 2026 would also be acceptable. **Transit mode splits will need to be adjusted from the 2011 TMP assumptions to reasonable percentages based on current year (2022) and "2025/2030/2035" planned and proposed mode splits (based on existing facilities and service in the area to date (planned &/or proposed). Reasonable assumptions and rationale must be clearly outlined in the Study.**

The proposed analysis of the weekday a.m. and p.m. peak periods, considering the existing (2022) scenario, the full-buildout year (assumed by 2025), along with five-years (2030) and ten-years (2035) beyond buildout, per MTO guidelines, is acceptable.

As requested, please find attached a 2019 TMC for Trafalgar at South Service Road.

For the study area intersection proposed, please add Trafalgar Road at Cornwall Road. The 2019 TMC is also attached.

Traffic Data/Growth Rate:

Any Regional information (traffic counts, signal timing) if needed, can be obtained from Halton through a request to our Road Operations staff at trafficdatarequets@halton.ca

Please use a 2% growth rate.

Trafalgar Road:

The timing of the implementation of the Trafalgar Road HOV lanes is undetermined at this time. As noted in the terms of reference, please assume the existing lane configuration along this section on Trafalgar Road.

Halton – Access, TIS Guidelines:

The Study must be in accordance to Halton Region's Transportation Impact Study Guidelines (2015).

Background Developments:

Town staff will provide all background developments to consider as part of the study.

Other general Study comments include:

The TIS report will include:

- *Site Plan and Map,*
- *Size & Number of Development Phases,*
- *Existing Conditions (Study Area Intersections, Road Network, Pedestrian Routes, Cycling Routes, Transit Services),*
- *Existing Traffic Conditions (Site Operating Characteristics, Data Collection/Traffic Counts, Analysis Periods (5 years Ahead),*
- *Future Background Conditions (Horizon Years, Horizon Year Volumes)*
- *Background Traffic Demand (with TMC's < 2 years old),*
- *Background Traffic Demand Forecast (with acceptable growth rates)*
- *Site Generated Traffic (Transit Modal Split, Trip Generation/Distribution/Assignment)*
- *Future Total Traffic Demand,*
- *Capacity Analysis (by Intersection, with LOS, Avg. Delay, V/C ratios),*
- *Traffic Impacts (Tables – Total Traffic with/without Mitigation)*
- *Access Considerations – Existing, Proposed, Geometrics (turn lanes, sight lines),*
- *Recommendations - Identify required/recommended road improvements either as a result of the development impacts, or general non-development improvements.*
- *TDM recommendations (Transit, Pedestrian & Cycling Facilities Analysis)*
- *Conclusions*

The above is also subject to the review and approval by both Town of Oakville and the Ministry of Transportation.

Thanks again for circulating.

Matt

Subject: TIS&PJS Terms of Reference - 349 Davis Road, Oakville

Hello Aidan,

I have been forwarded your email to Bernie regarding a Terms of Reference for a Traffic Impact Study for the proposal development located at 349 Davis Road in Oakville.

Please find Matt Krusto cc'd in this email. He is the Supervisor for Transportation Development that will be able to comment on your Terms of Reference.

Please let me know if you have any additional questions.

Thank you,
Michaela

Per the attached conceptual site plan, the development proposes:

- A 20-storey mixed use building comprised of:
  - Four (4) commercial units with a combined Gross Floor Area (GFA) of 1,042m^2
  - Six (6) office units with a combined Gross Floor Area (GFA) of 3,583.2m^2
  - A total of 98 residential apartment dwelling units
- A total of 235 vehicle parking spaces located across a two-level underground parking garage, a three (3) level above-ground parking garage, and a surface parking lot
- A single full-moves site access connection to Davis Road

Transportation Impact Study – Scope:

The Transportation Impact Study will be completed in accordance with the Halton Region Traffic Impact Study Guidelines (January 2015) and the MTO's General Guidelines for the Preparation of Traffic Impact Studies (February 2021).

- It is understood that the site is located within the Midtown Oakville Growth Area per the Town's Official Plan (as of August 31, 2021). The Traffic Impact Study will not consider the proposed Cross Avenue realignment and Cross Avenue QEW EB off-ramp given these improvements would impact the current development proposal. Instead, the study will analyze transportation impacts given the existing road network and recommend improvements to the network, as required. Apart from the conversion of Trafalgar Road to 4+2HOV lanes, road improvements will be identified based on the existing road network configuration as required for the future background and future total scenarios.

- Analysis of the weekday a.m. and p.m. peak periods will suffice. The TIS scope will consider the existing (2022) scenario, the full-buildout year (assumed by 2025), along with five-years (2030) and ten-years (2035) beyond buildout, per MTO guidelines.

To: Aidan Hallsworth
Cc: Peter Apasnore
Subject: RE: TIS&PJS Terms of Reference - 349 Davis Road, Oakville

Good afternoon Aidan,

Please see below comments regarding the Traffic ToR.

1. The ministry has noted that a couple of developments have come in that will be impacting the QEW/Trafalgar interchange. The ministry would prefer the submission of one combined TIS for all developments that would use the QEW/Trafalgar Road interchange.
    a. In case, each developer submits separate TIS, then MTO will review, on first come first serve basis.
2. Existing road network will be used for all analysis.
   In case, a developer proposes any addition/modification to existing road network, it should be developer's responsibility and be part of the project.
   If a particular road improvement by the Town/Region is included in the TIS then a written confirmation by the Town/Region MUST be provided otherwise the TIS will not be accepted.
3. QEW/Trafalgar Road IC: Traffic analysis would be acceptable using single IC.
4. Traffic forecasts (2% annually) would be acceptable for the TISs.

Please let me know if you have any questions.

Thanks,

Subject: TIS&PJS Terms of Reference - 349 Davis Road, Oakville

Hello all,

We are reaching out to present a Terms of Reference for a Traffic Impact Study (TIS) and Parking Justification Study (PJS) for the proposed mixed-use development at 349 Davis Road in the Town of Oakville.

Our proposed workplan is presented below. I have underlined a couple important items that require responses from each of you. We would appreciate your feedback on our proposed Terms of Reference. Should you have any questions or concerns, please feel free to contact me or Peter Apasnore (cc'd), we would be more than happy to discuss.

Thank you,

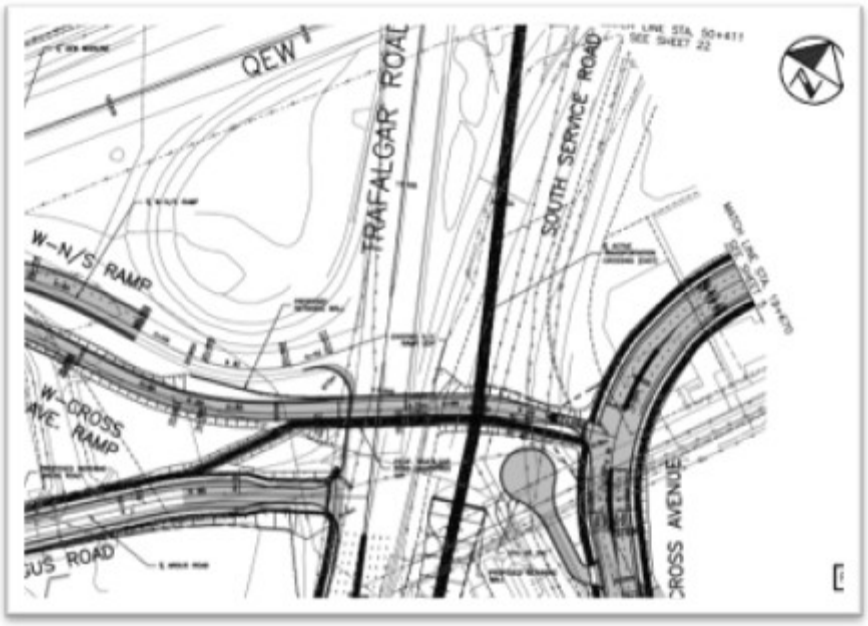
Per the attached conceptual site plan, the development proposes:

- A 20-storey mixed use building comprised of:
  - Four (4) commercial units with a combined Gross Floor Area (GFA) of 1,042m^2
  - Six (6) office units with a combined Gross Floor Area (GFA) of 3,583.2m^2
  - A total of 98 residential apartment dwelling units
- A total of 235 vehicle parking spaces located across a two-level underground parking garage, a three (3) level above-ground parking garage, and a surface parking lot
- A single full-moves site access connection to Davis Road

Transportation Impact Study – Scope:

The Transportation Impact Study will be completed in accordance with the Halton Region Traffic Impact Study Guidelines (January 2015) and the MTO's General Guidelines for the Preparation of Traffic Impact Studies (February 2021).

- It is understood that the site is located within the Midtown Oakville Growth Area per the Town's Official Plan (as of August 31, 2021). The Traffic Impact Study will not consider the proposed Cross Avenue realignment and Cross Avenue QEW EB off-ramp given these improvements would impact the current development proposal. Instead, the study will analyze transportation impacts given the existing road network and recommend improvements to the network, as required. Apart from the conversion of Trafalgar Road to 4+2HOV lanes, road improvements will be identified based on the existing road network configuration as required for the future background and future total scenarios.
  [AK:] The site has to consider the proposed Cross Avenue realignment and Cross Avenue QEW EB off-ramp as outlined in the approved 2013 EA study. Town staff will not accept the assessment without the inclusion of the Cross Avenue realignment and the Cross Avenue QEW off-ramp.
  Please refer to the image below, which was taken from Sheet 2, Appendix K of the Midtown Oakville Final Environmental Study Report.



As shown above, the Cross Avenue realignment and ramp intersection is within the 349 Davis Road site. Our understanding based on the first pre-consultation is the City is supportive of an application for the site. We are unable to consider the subject intersection or realignment in this study as it renders the site undevelopable and traffic analysis for the site will make no sense. As such, as noted already, the study will focus on analyzing the existing transportation network and recommend improvements as required.***[AK:]*** The EA study needs to be incorporated.

- Analysis of the weekday a.m. and p.m. peak periods will suffice. The TIS scope will consider the existing (2022) scenario, the full-buildout year (assumed by 2025), along with five-years (2030) and ten-years (2035) beyond buildout, per MTO guidelines.***[AK:]*** Please include 2045 in your horizon analysis.
  Please clarify why a 2045 horizon is required to assess the transportation impacts to the proposed development. Previous transportation studies for developments of similar context and scope (e.g., the noted studies for the 157 Cross Avenue and 485 Trafalgar Road / 271 Cornwall Road background developments) did not analyze a 2045 horizon. Further, the Region of Halton TIS guidelines outline a horizon year of five years beyond the existing scenario, and ten years as requested by Halton Region staff. The MTO TIS guidelines outline the horizons as originally proposed. Therefore, it is our opinion that horizons years of 2025, 2030, and 2035 are sufficient to assess the transportation impacts of the development proposal. ***[AK:]*** Please disregard the 2045 horizon.

- Analysis of the following study intersections will suffice:
    - Trafalgar Road and North Service Road East / QEW WB off-ramp
    - Trafalgar Road and QEW EB off-ramp
    - Trafalgar Road and South Service Road East / Cross Avenue
    - South Service Road East and Davis Road***[AK:]*** (this intersection should include the off-ramp volumes anticipated for future horizons as per the Midtown Oakville EA)
    - Davis Road and the proposed site access

[AK:] the study intersection should include the following for the future horizons that aligns with the existing Midtown Oakville EA study:

- Davis Road & North South Crossing
- Cross Avenue Realignment and Station Road
- Trafalgar Road & QEW WB on-ramp
- Trafalgar Road & WEQ EB on-ramp

Noted, The on-ramp intersections to Trafalgar Road noted above will be included within the proposed scope of work.

Per the Mid-Town study, Davis Road is not planned to be kept, except to retain an access to the existing 354 Davis Road site. Therefore, Davis Road & North South Crossing does not exist and can't be analyzed. Further, as previously outlined, improvements in the Midtown EA that impact the development proposal cannot be considered within the scope, therefore, the Cross Avenue / Station Road intersections will not be included in the TIS scope. ***[AK:]*** These intersections are forecasted in the EA study and should be assessed as future intersections.

- Existing, future background and future total traffic operations will be analyzed using Synchro 11. Standard traffic operations metrics for signalized and unsignalized intersections including delays, volume-to-capacity ratios, and 95th percentile queue length will be analyzed and reported on.***[AK:]*** ok

- Traffic counts will be commissioned at the above noted study intersections along South Service Road East. We will compare the results of the traffic survey with the Halton Region traffic survey at Trafalgar Road & South Service Road (2017) to understand if and/or what pandemic traffic demand adjustments shall be applied to the above noted study intersections. @Syed Rizvi or @Bernie.Stager@halton.ca, *if you could advise if there are more recent pre-pandemic counts conducted at this intersection, or refer us to the appropriate contact, we would greatly appreciate it.****[AK:]*** *please undertake new traffic counts for the existing horizon(2022) for study intersections and compare with the pre-pandemic counts.*

- Traffic counts were previously conducted in 2019 at the MTO ramp terminal study intersections as part of the Olde Oakville Transportation Study (July 2019, by R.J. Burnside & Associates Limited). These traffic counts from 2019 will be grown to 2022 levels using the growth rates that will be applied for the future traffic volume projections.***[AK:]*** see comment above

Per request, traffic counts will be undertaken at the study intersection and will be compared with the pre-pandemic counts, where applicable. The more conservative volumes will be used and volume balancing applied as applicable.

- Traffic operations will be analyzed using Synchro 11. Standard operational measures of effectiveness will be analyzed and reported on. (ie. level of service, control delay, volume-to-capacity ratios, and 95th percentile queues).***[AK:]*** ok

- Per the Region of Halton Transportation Master Plan (2011), modification of Trafalgar Road to a 4+2 Lanes for Transit/HOV configuration has been identified as an improvement near the subject site in the 2031 Transportation System. *@Bernie.Stager@halton.ca: Please advise on the timing of this change, otherwise we will assume current configuration.* When HOV lanes are to be implemented, per the Region of Halton TIS guidelines, we will assign a lane utilization factor of 0.80 for each HOV lane.

- Future traffic growth projections:

    - *@Syed Rizvi: As discussed above, the Midtown Oakville EA improvements make the development proposal undevelopable. Therefore, unless otherwise advised, we will only consider the two background developments identified on the Town of Oakville's development applications website to capture background growth in the Midtown Oakville area:*
        - 271 Cornwall Road and 485 Trafalgar Road – Two mixed use buildings (14 and 19 storeys)
        - 157 Cross Avenue – A 26 storey mixed use building

    [AK:] please include these as background developments, calculate the trip generations where applicable:

        - Empress Capital Group Ltd. c/o API Development Consultants Inc. - 170 North Service Road West - Z.1517.18 & OPA 1517.18 ***[AK:]*** Please disregard this intersection. I didn't realize it was outside the midtown study area.
        - Region of Halton - 320 Davis Road - 1612.017/02

    The 320 Davis Road development will be added to the proposed scope. As far as can be ascertained, a transportation study was not prepared for this pumper station building expansion. Given the pumper station land use does not have widely available applicable traffic data to estimate background traffic volumes, site traffic will instead be estimated based on traffic volumes associated with the west approach (which is access to the site). Gross Floor Area increment will be used to estimate expected traffic growth resulting from the building expansion.

    The 170 North Service Road West development is located approximately 2Km away from the 349 Davis Road site. The background development is located near the QEW/403 highway interchange with Dorval Drive. It is not expected this site will have a material impact to the proposed study intersections. We propose to exclude this background development from the study scope – please confirm.

    [AK:] As per our discussion, the additional background development is as follows:

        - 166 South Service Road (see attached for preliminary site plan) – these buildings will consist of approximately 1,720 residential high-rise units. Please include in your assessment.

    - *@Bernie.Stager@halton.ca: Please advise on what approach the Region prefers for estimating traffic growth along Trafalgar Road.* If traffic data to support growth rates is not available, an industry standard growth rate of 2% per annum will be used.

    - *@Graham Routledge: Please advise on growth rates to apply to the MTO ramps.* If traffic data to support growth rates is not available, an industry standard growth rate of 2% per annum will be used.

- Site Trip Generation will be forecasted using the Institute of Transportation Engineers' Trip Generation Manual, 11th Edition. Site trips will be distributed to the road network using the 2016 Transportation Tomorrow Survey Data.***[AK:]*** ok

- Comparison of the future background and total traffic operations will be performed to identify if capacity issues are to occur per the development proposal herein and recommend mitigation measures, as necessary.***[AK:]*** ok

- The proposed full-moves site access will be reviewed from a safety perspective with regards to design vehicle maneuverability, drive sight lines, intersection spacing, and corner clearance. The safety assessment will be based on the standards set out by the Transportation Associates of Canada (TAC) Geometric Design Guide for Canadian Roads (GDGCR).***[AK:]*** ok

- Existing and future Transportation Demand Management (TDM) opportunities will be reviewed along with site specific measures that may be implemented to reduce SOV trips and promote non-auto transportation.***[AK:]*** ok

Parking Justification Study – Scope:

- Review the Town's minimum parking requirements according to the Town's Zoning By-Law No. 2014-014 and compare with the proposed supply. Further, the parking supply will be compared to the rates identified in the Midtown Oakville Parking Strategy.***[AK:]*** ok
- Forecast the peak parking demand and determine whether the parking supply is sufficient to meet the calculated demand, using the Institute of Transportation Engineers Parking Generation Manual 5th Edition and Transportation Tomorrow Survey Data, as applicable.***[AK:]*** ok
- We will utilize previously conducted parking surveys from proxy sites with similar characteristics to the proposed development to support a reduced parking rate.***[AK:]*** ok
- Identify Transportation Demand Management (TDM) opportunities available to the site and assess potential site-specific measures that may be used to further support a reduced parking supply.***[AK:]*** ok
- Based on the findings, confirm the adequacy or shortfall of the proposed parking supply and provide recommendations.***[AK:]*** ok

OAKVILLE

6. Design Elements of the Preferred Concept

This section describes the engineering features and mitigation measures for the preferred concept identified in **Section 5**. The preferred concept for Midtown Oakville was developed and refined with input from the project team, technical agencies, and various stakeholders, and includes the following:

Improvements to the QEW Trafalgar Road Interchange

- Realignment of the existing eastbound QEW off-ramp
- New eastbound QEW direct off-ramp to Cross Avenue
- New multi-use trail from Argus Road to Cross Avenue under Trafalgar Road
- Realignment of South Service Road
- Realignment of Argus Road

Improvements to the QEW Royal Windsor Drive Interchange

- New westbound QEW off-ramp
- New eastbound QEW on-ramp, including auxiliary lane to Ford Drive off-ramp
- Realignment of eastbound QEW off-ramp
- New eastbound QEW direct off-ramp to Cross Avenue
- Widening and extension of Royal Windsor Drive to to Iroquois Shore Road at Eighth Line
- Realignment of North Service Road
- Realignment of South Service Road

New North-South Crossing across QEW

- Provides pedestrian / cyclist facilities
- Provides dedicated bus lanes
- Provides general purpose lanes
- Accommodates potential widening of the QEW that may be contemplated by MTO

Extension of Cross Avenue

- New connection from Trafalgar Road to Royal Windsor Drive
- Provides pedestrian / cyclist facilities
- Accommodates general purpose lanes
- Accommodates lay-by parking where appropriate

Widening of Iroquois Shore Road

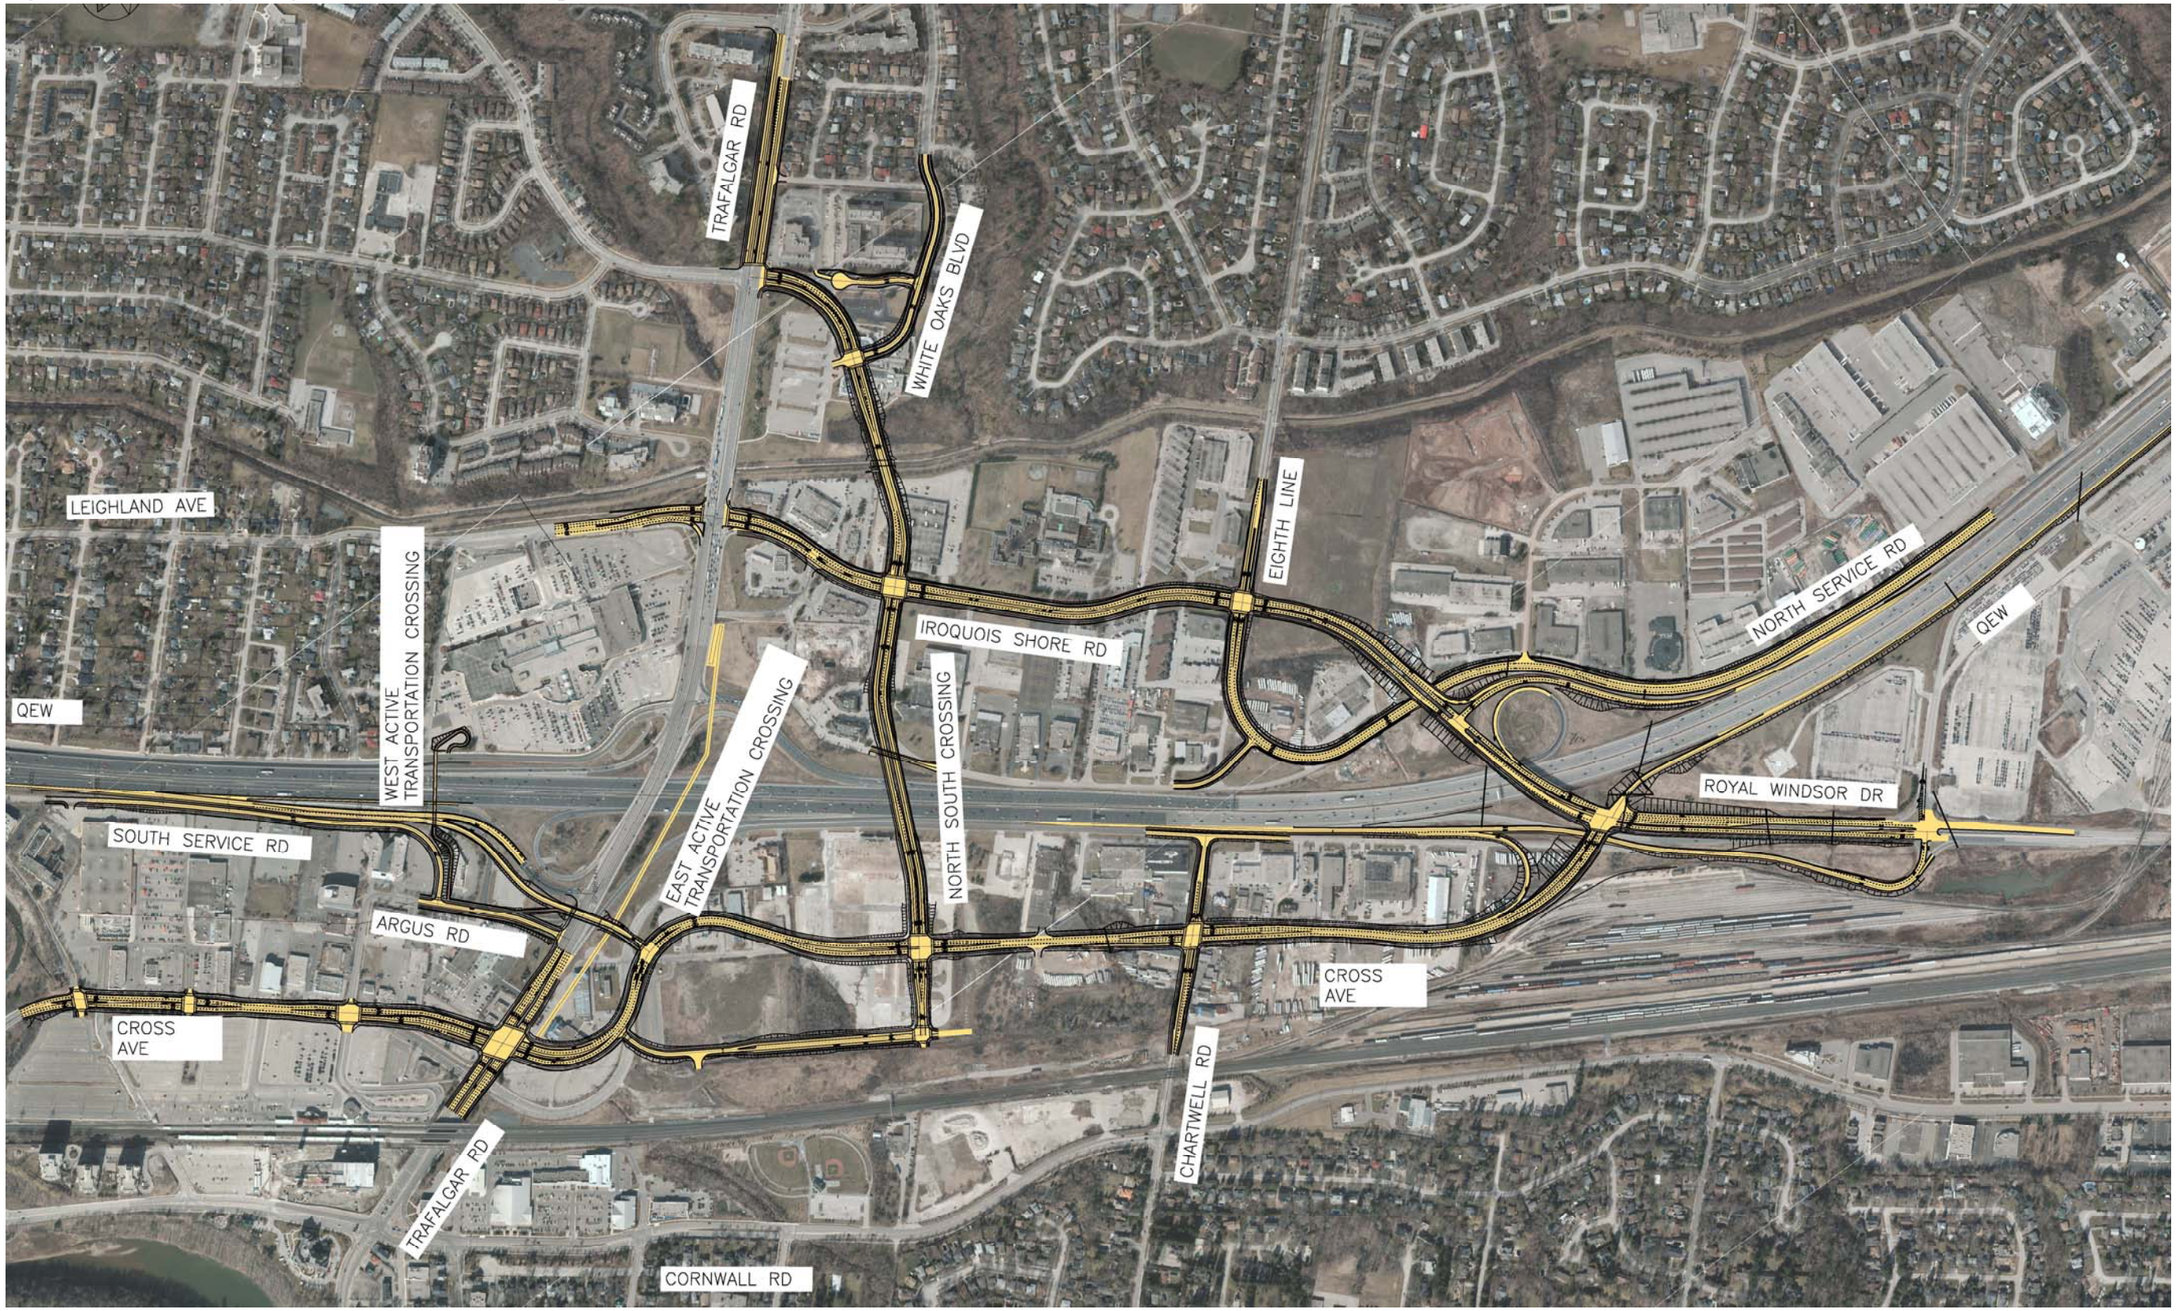
- Provides continuous pedestrian / cyclist facilities on both sides of the road
- Accommodates one additional general purpose lane in each direction plus a median turn lane

Active Transportation Crossings across QEW

- Active transportation crossing of QEW on the east side of Trafalgar Road
- Active transportation crossing of QEW on the west side of Trafalgar Road

Figure 6-1 shows the overall preliminary design of the recommended concept for Midtown Oakville.

Figure 6-1: Preliminary Design of Recommended Concept



This page intentionally left blank.

6.1. Road Characteristics and Typical Sections

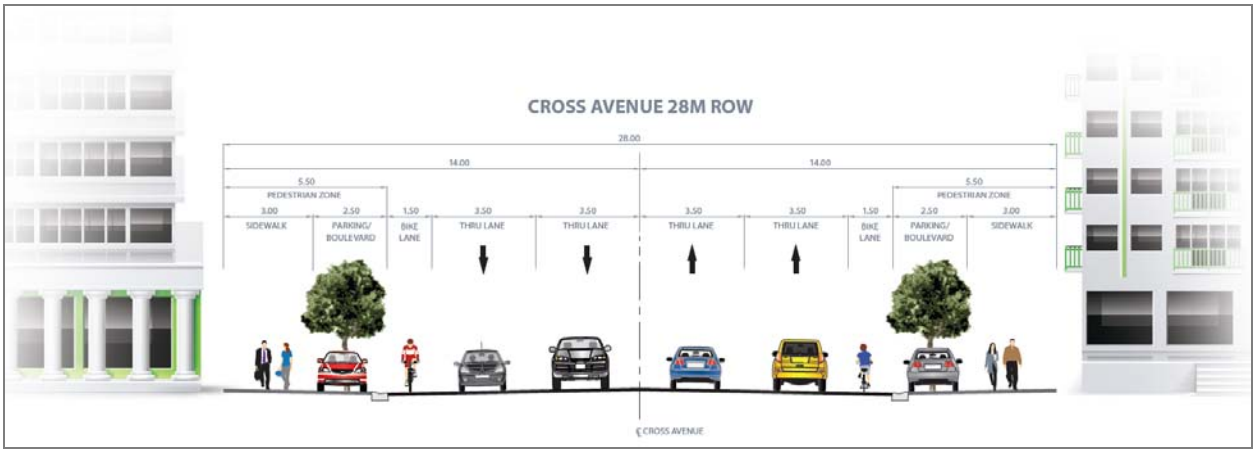
Midtown Oakville is to be transformed into a complete mixed use community with offices, condominiums, civic spaces, parks and plazas. Roadways are envisaged as main streets or commercial/employment corridors with accommodation for pedestrians, cyclists, public transit, and general purpose traffic. A description of the role and function of the roadways in Midtown Oakville are provided below.

6.1.1. Cross Avenue

Cross Avenue is proposed to be the "main street" for Midtown Oakville. It will be a multi-modal corridor serving pedestrians, cyclists, public transit, and general purpose traffic. West of Trafalgar Road, Cross Avenue will have more of a pedestrian-focused streetscape. East of Trafalgar Road, the extension of Cross Avenue will primarily serve commercial/employment lands.

Within the proposed right-of-way of 28 m, Cross Avenue will have four 3.5 m general purpose travel lanes, two 1.5 m bike lanes, and 5.5 m boulevards as shown in **Figure 6-2**. The 5.5 m boulevards are intended to include 3.0 m sidewalks and 2.5 m lay-by parking. In areas without lay-by parking, the full 5.5 m boulevard is designated as a pedestrian zone.

Figure 6-2: Cross Avenue Cross-section



6.1.2. North-South Crossing

The North-South Crossing is proposed to be a multi-modal corridor serving transit, cyclists, pedestrians, and general purpose traffic. Reserved bus lanes are proposed from Trafalgar Road to the proposed bus loop located on the east side of Trafalgar Road. North of Iroquois Shore Road, the North-South Crossing will have a 28 m right-of-way. South of Iroquois Shore Road, the North-South Crossing will need a 32 m right-of-way to accommodate median turn lanes.

Within the proposed 28 m right-of-way, the North-South Crossing will have two 3.5 m general purpose lanes, two 3.75 m transit lanes, two 1.5 m bike lanes, two 2.5 m boulevards, and a 3.0 m multi-use trail on one side, and a 1.5 m sidewalk on the other side as shown in **Figure 6-3**. Where a 32 m right-of-way is required, a 5.0 m median will be provided which is intended to accommodate exclusive turn lanes at the intersection with Cross Avenue as shown in **Figure 6-4**.

Figure 6-3: North-South Crossing Cross-section (North of Iroquois Shore Road)

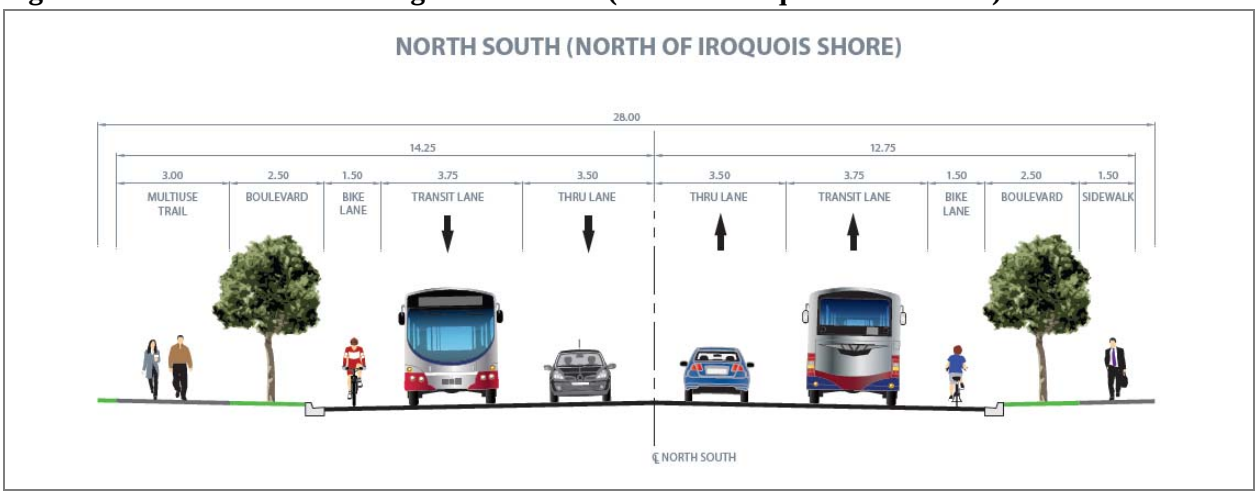


Figure 6-4: North-South Crossing Cross-section (South of Iroquois Shore Road)

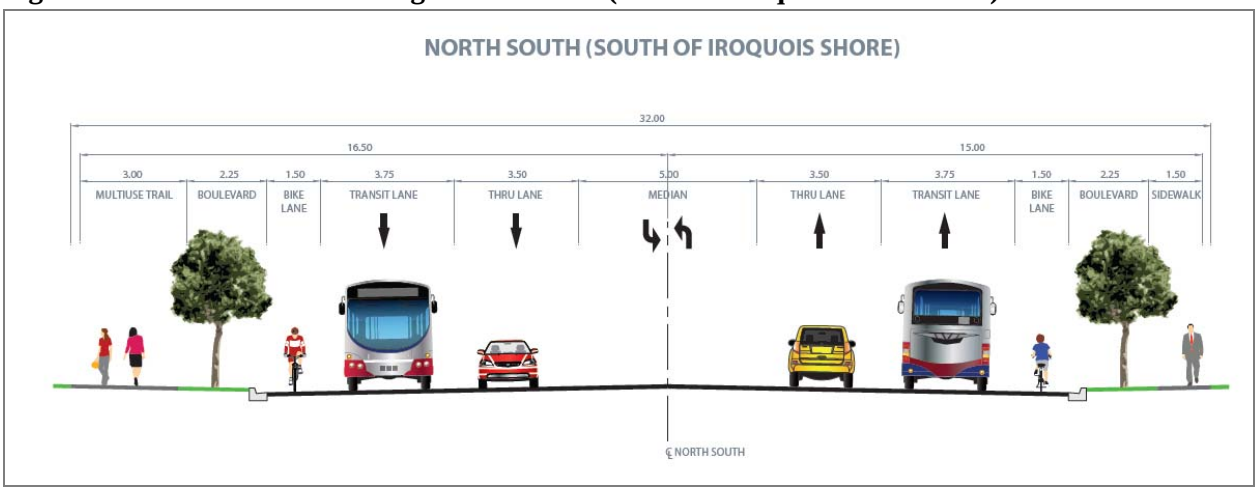

6.1.3. Royal Windsor Drive

Royal Windsor Drive is a multi-modal corridor serving transit, cyclists, pedestrians, and general purpose traffic. The extension to Iroquois Shore Road provides new opportunities for all users. North of QEW, Royal Windsor Drive will have a 32 m right-of-way. South of QEW, Royal Windsor Drive will need a 36 m right-of-way to accommodate median turn lanes.

Within the proposed 32 m right-of-way, Royal Windsor Drive will have four 3.5 m general purpose lanes, two 3.0 m boulevards, and a 3.0 m bike trail and 2.0 m multi-use trail on one side as shown in **Figure 6-5**. Where a 36 m right-of-way is required, Royal Windsor Drive will have four 3.5 m general purpose lanes, 9.0 median, with a right turn lane on one side, and a 2.5 m boulevard, a 3.0 m bike trail and a 2.0 m multi-use trail on the other side as shown in **Figure 6-6**.

Figure 6-5: Royal Windsor Drive Cross-section (North of QEW)

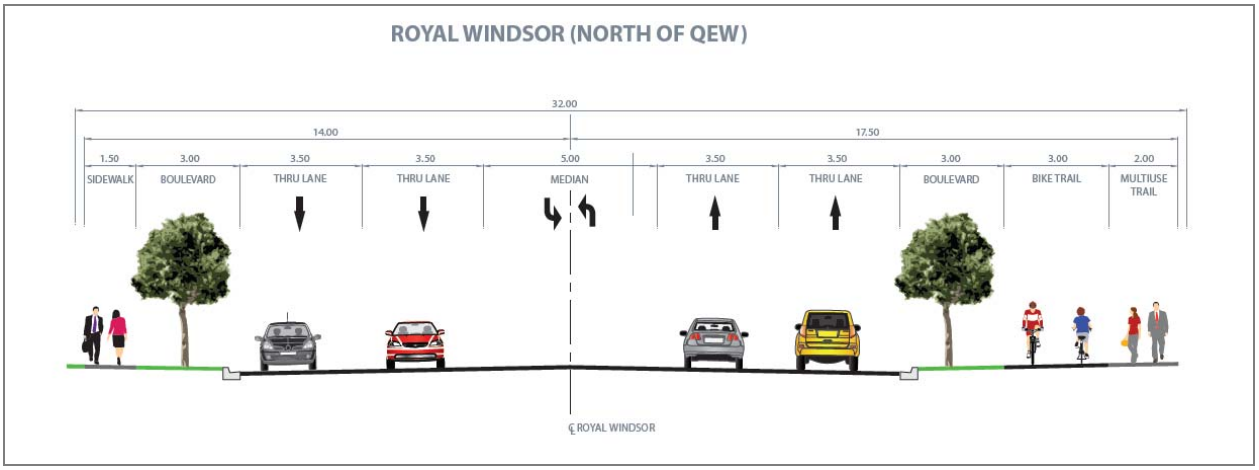

Figure 6-6: Royal Windsor Drive Cross-section (South of QEW)

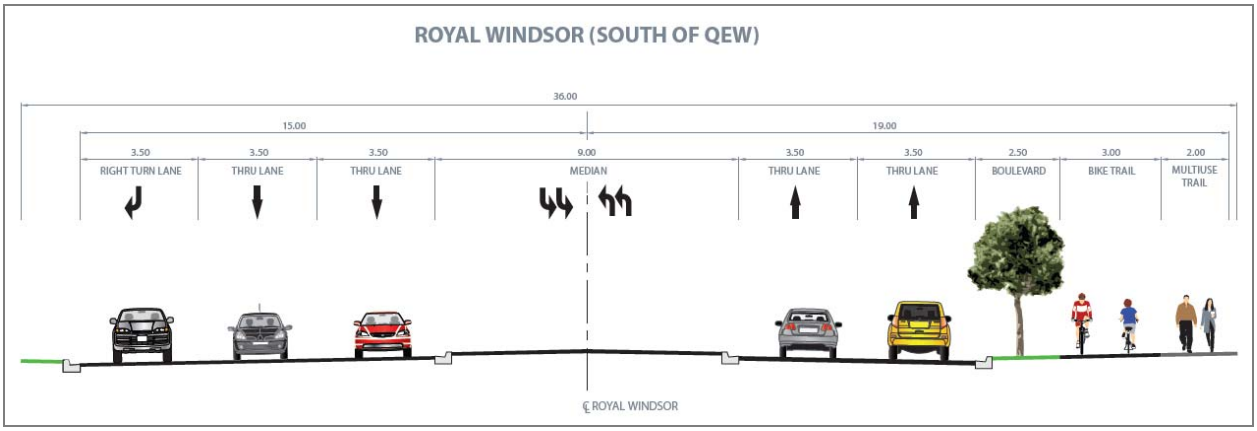
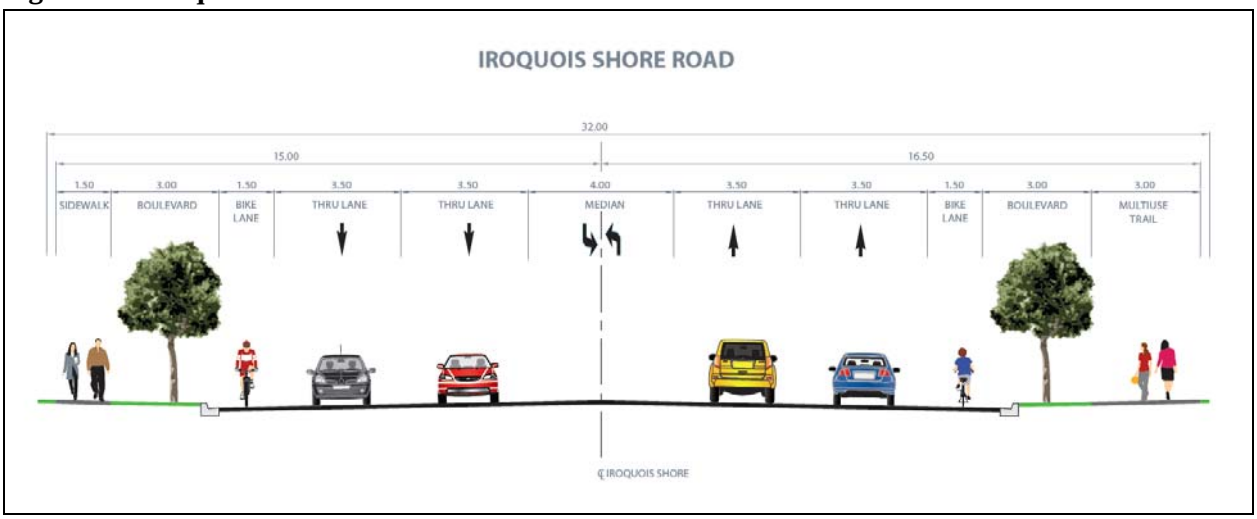


6.1.4. Iroquois Shore Road

Iroquois Shore Road is a multi-modal corridor serving transit, cyclists, pedestrians, and general purpose traffic. The widening of Iroquois Shore Road will provide benefits to all users. Iroquois Shore Road will have a 32 m right-of-way, which will accommodate four 3.5 m general purpose lanes, two 1.5 m bike lanes, two 3.0 m boulevards, one 3.0 m multi-use trail, and one 1.5 m sidewalk as shown in **Figure 6-7**.

Figure 6-7: Iroquois Shore Road Cross-section



6.1.5. East Active Transportation Crossing

An active transportation crossing of the QEW is provided on the east side of Trafalgar Road which enables cyclists and pedestrians to cross the QEW and all associated ramps within a separated right-of-way. This crossing offers users a direct connection between Oakville Place Drive and the Oakville GO station along the east side of Trafalgar Road. The closeness of the crossing to Trafalgar Road makes it an ideal alternative for those wishing to walk or cycle northbound or southbound along Trafalgar Road which presents opportunities for conflicts between vehicles and cyclists and pedestrians. Due to the redevelopment of Midtown Oakville over the next decade or so, it is anticipated the crossing will accommodate many residents, visitors, and employees within the area.

This facility is contained within a separated right-of-way for cyclists and pedestrians only. It is equipped with stairs/ramps and resting areas for users on both the ascent and descent. At the highest point (i.e. across the QEW), cyclists and pedestrians would be allowed to travel without exerting substantial effort as the slopes are designed to be compliant with Accessibility for Ontarians with Disabilities Act (AODA) standards.

6.1.6. West Active Transportation Crossing

An active transportation crossing of the QEW is provided on the west side of Trafalgar Road which connects the southwest corner of Oakville Place and the adjacent residential neighbourhood to Midtown Oakville and the Oakville Gestation, as well as other areas south of the QEW and west of Trafalgar Road. The crossing was limited in terms of the flexibility of its location due to an existing pier which was previously constructed for this crossing (approximately 300 m west of Trafalgar Road). However, due to the redevelopment of Midtown Oakville over the next decade or so, it is anticipated the crossing will accommodate many residents, visitors, and employees within the area.

How to read our schedules

Step 1
Find the station or terminal you are departing from. Stops are listed across the top in the order they are served.

Step 2
The upper left corner tells you what day the schedule is for and the direction of travel.

Step 3
Look across the rows for available departure times.

Step 4
Not all trains or buses stop at every station. If you see → the train or bus will not stop at that station.

Schedule times shown in 24-hour clock

Notes

h Trip holds for connection from bus.

Bicycles

1. Bicycles are not allowed in Union Station or on-board trains during morning rush hour (6:30-9:30) and evening rush hour (15:30-18:30), Monday to Friday.

2. Foldable bicycles are allowed on-board trains at all times.

Comment lire nos horaires

Étape 1
Trouvez votre gare ou terminus de départ. La liste des arrêts est donnée en haut dans l'ordre dans lequel ils sont desservis.

Étape 2
Le coin supérieur gauche vous indique le jour pour lequel l'horaire est donné et la direction de circulation.

Étape 3
Regardez dans les rangées pour obtenir les heures de départ offertes.

Étape 4
Les trains ou les autobus ne s'arrêtent pas tous à chaque gare. Si vous voyez le symbole → le train ou l'autobus ne s'arrêtera pas à cette gare.

METROLINX

52 54 56

- Oshawa
- Whitby
- Pickering
- Markham
- Richmond Hill
- Hwy. 407 Bus Terminal
- Brampton
- Mississauga
- Oakville

Daily / Quotidiennement
Includes GO Bus routes 52, 54, 56 / Inclut les trajets 52, 54, 56 d'autobus GO

Effective / À partir de:
25 JUNE JUIN **2022**

How to read our schedules

Step 1
Find the station or terminal you are departing from. Stops are listed across the top in the order they are served.

Step 2
The upper left corner tells you what day the schedule is for and the direction of travel.

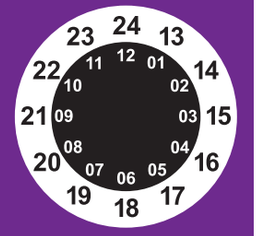
Step 3
Look across the rows for available departure times.

Step 4
Not all trains or buses stop at every station. If you see → the train or bus will not stop at that station.

Schedule times shown in 24-hour clock

Midnight to noon
00 01 - 12 00

Noon to midnight
12 01 - 24 00



Legend

Bus trips

→ Trip does not serve this location.

GO Bus service is accessible to passengers using mobility devices at this location.

Parking available.

Notes

Bicycles

1. Bicycles are not allowed in Union Station or on-board trains during morning rush hour (6:30-9:30) and evening rush hour (15:30-18:30), Monday to Friday.

2. Foldable bicycles are allowed on-board trains at all times.

For the latest schedule information and updates, please visit gotransit.com/schedules.

Comment lire nos horaires

Étape 1
Trouvez votre gare ou terminus de départ. La liste des arrêts est donnée en haut dans l'ordre dans lequel ils sont desservis.

Étape 2
Le coin supérieur gauche vous indique le jour pour lequel l'horaire est donné et la direction de circulation.

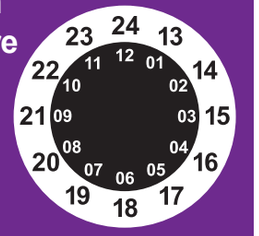
Étape 3
Regardez dans les rangées pour obtenir les heures de départ offertes.

Étape 4
Les trains ou les autobus ne s'arrêtent pas tous à chaque gare. Si vous voyez le symbole → le train ou l'autobus ne s'arrêtera pas à cette gare.

Indications selon un système horaire de 24 heures

De minuit à midi:
00 01 - 12 00

De midi à minuit:
12 01 - 24 00



Légende

APPENDIX F

Level of Service Definitions

Level of Service Definitions

Two-Way Stop Controlled Intersections

Level of Service	Control Delay per Vehicle (seconds)	Interpretation
A	≤ 10	EXCELLENT. Large and frequent gaps in traffic on the main roadway. Queuing on the minor street is rare.
B	> 10 and ≤ 15	VERY GOOD. Many gaps exist in traffic on the main roadway. Queuing on the minor street is minimal.
C	> 15 and ≤ 25	GOOD. Fewer gaps exist in traffic on the main roadway. Delay on minor approach becomes more noticeable.
D	> 25 and ≤ 35	FAIR. Infrequent and shorter gaps in traffic on the main roadway. Queue lengths develop on the minor street.
E	> 35 and ≤ 50	POOR. Very infrequent gaps in traffic on the main roadway. Queue lengths become noticeable.
F	> 50	UNSATISFACTORY. Very few gaps in traffic on the main roadway. Excessive delay with significant queue lengths on the minor street.

Adapted from Highway Capacity Manual 2000, Transportation Research Board

Level of Service Definitions

Signalized Intersections

Level of Service	Control Delay per Vehicle (seconds)	Interpretation
A	≤ 10	EXCELLENT. Extremely favourable progression with most vehicles arriving during the green phase. Most vehicles do not stop and short cycle lengths may contribute to low delay.
B	> 10 and ≤ 20	VERY GOOD. Very good progression and/or short cycle lengths with slightly more vehicles stopping than LOS "A" causing slightly higher levels of average delay.
C	> 20 and ≤ 35	GOOD. Fair progression and longer cycle lengths lead to a greater number of vehicles stopping than LOS "B".
D	> 35 and ≤ 55	FAIR. Congestion becomes noticeable with higher average delays resulting from a combination of long cycle lengths, high volume-to-capacity ratios and unfavourable progression.
E	> 55 and ≤ 80	POOR. Lengthy delays values are indicative of poor progression, long cycle lengths and high volume-to-capacity ratios. Individual cycle failures are common with individual movement failures also common.
F	> 80	UNSATISFACTORY. Indicative of oversaturated conditions with vehicular demand greater than the capacity of the intersection.

Adapted from Highway Capacity Manual 2000, Transportation Research Board

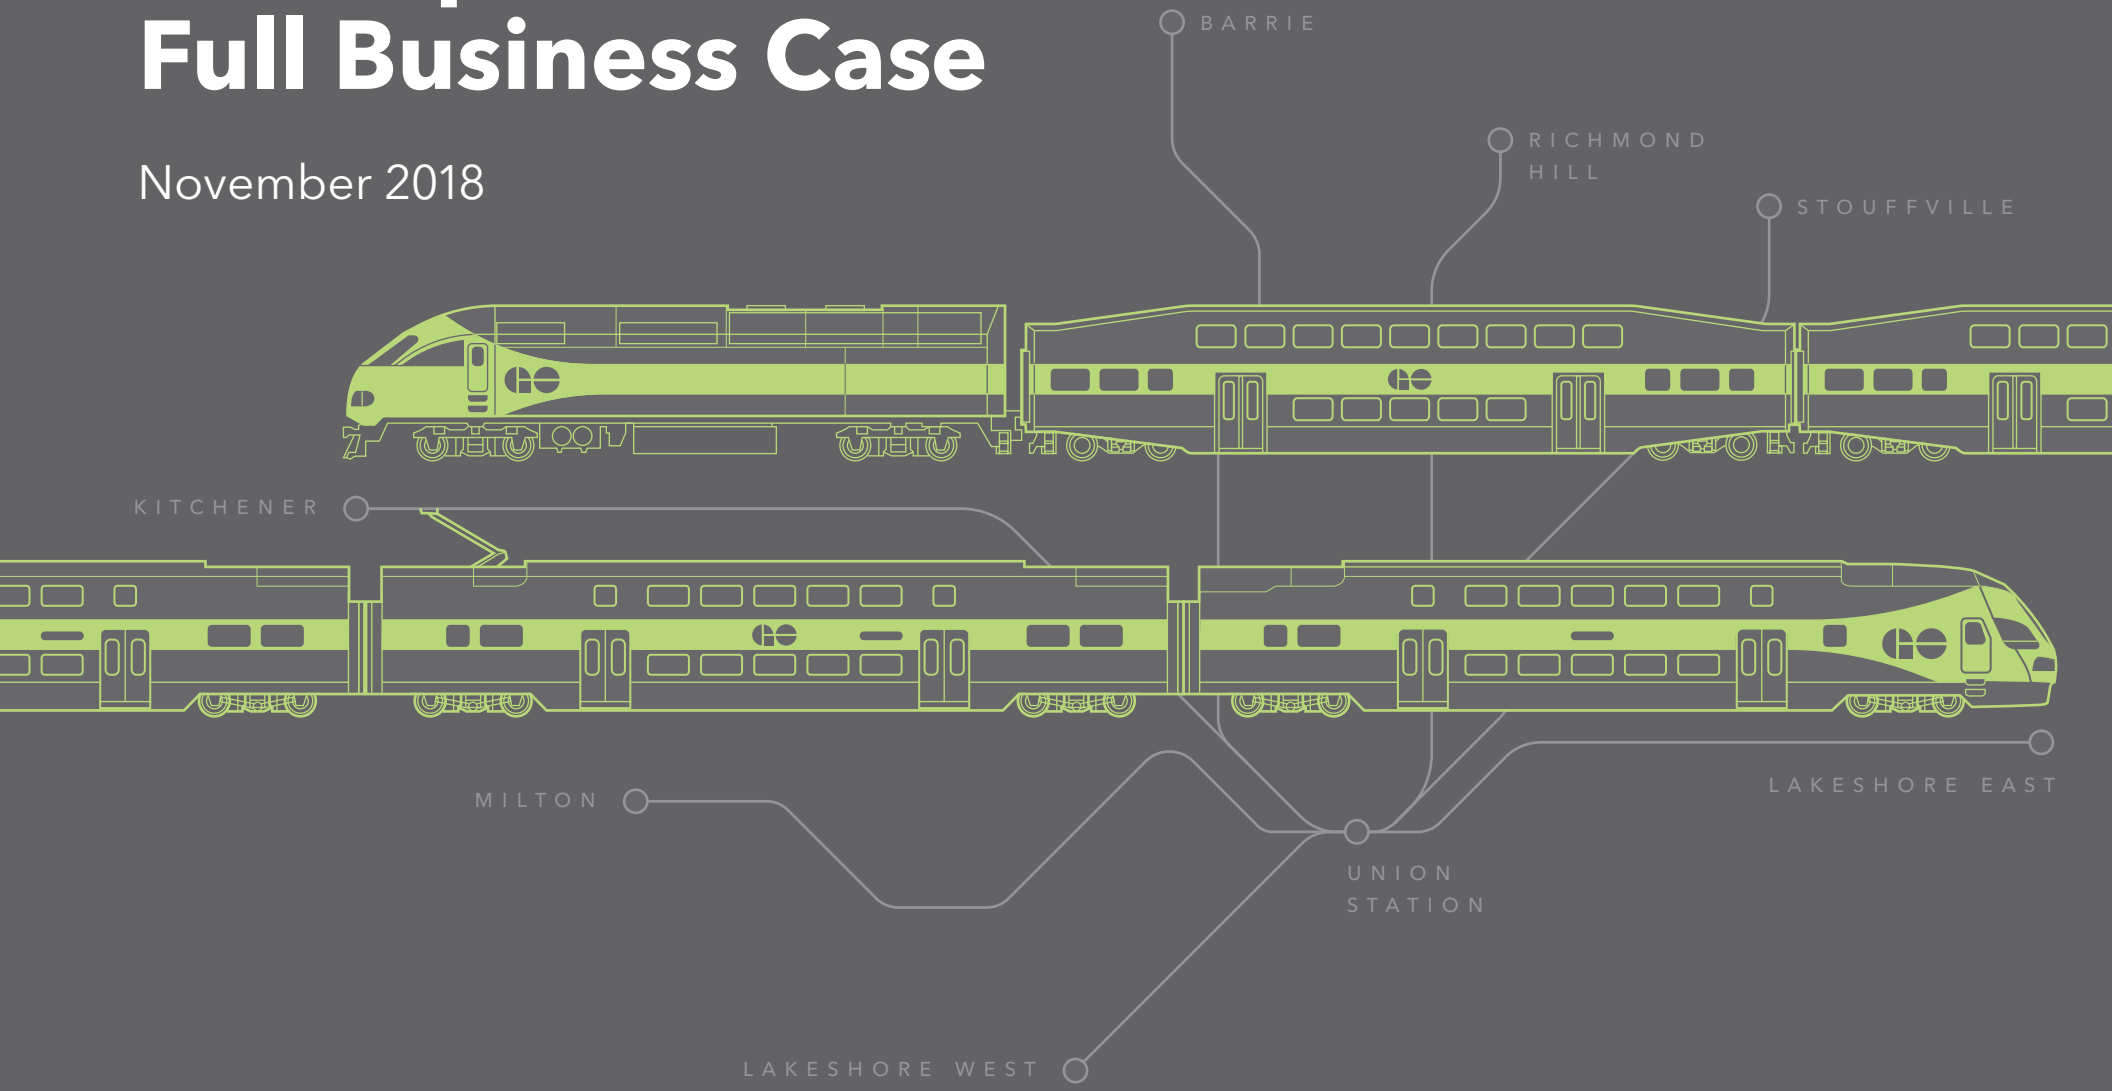
Excerpts – GO Expansion Full Business Case

METROLINX

GO Expansion Full Business Case

November 2018



LSW Lakeshore West

Lakeshore West Today

Lakeshore West is GO Rail's most heavily used corridor, with 48,000 peak passengers and 16,000 mid-day, contra-peak, and all-day passengers. Large parts of the corridor have been urbanized since the 1950s but intensification continues especially around Oakville and Aldershot stations.

The Lakeshore West Line currently offers two-way all-day service between Union Station and Aldershot with trains arriving every 15-20 minutes in the peak period and every 30 minutes throughout the rest of the day and on evenings and weekends. Additionally, there are trains to Union Station from Hamilton in the morning and trains from Union Station to Hamilton in the evening.

Investment Summary

As part of GO Expansion, Lakeshore West will receive significant investment which is summarized in Table 3.2. The travel time and frequency improvements included in this program are illustrated in Figure 3.7.

Table 3.2: GO Expansion Improvements to the Lakeshore West Line

Program Element	Performance Objectives	Next Steps
MORE ACCESSIBLE STATIONS	• **Customers can board and alight faster, reducing trip times by 2-5 minutes**	• Improvements at: Exhibition, Mimico, Long Branch, Clarkson, Oakville, Bronte, Appleby, Burlington
MORE ALL-DAY SERVICE **SERVICE IN BOTH DIRECTIONS** **TRAINS EVERY 15 MINUTES**	• **282 weekday services** • **Detailed service plan shown in Figure 3.5** • **Two-way all-day service between Union and Hamilton, fifteen minute service or better between Burlington and Union**	• 20.4 km of new track, two new road/rail separations • All-day EMU service comprises 2 tph stopping at all stations to/from Burlington, and 2 tph stopping at all stations to/from Oakville. • All-day Aldershot trains stop at Burlington, Bronte, Appleby, Oakville and Clarkson offering a combined service from these stations, half of which are express from Oakville • Oakville and Clarkson have 6 tph, comprising 2 express and 4 all stations. Port Credit and all stations to Union have 4 tph all day
FASTER AND MORE EFFICIENT TRAINS	• **Up to 8% faster for electric locomotive services** • **Up to 29% faster for EMU service**	• Electrification from Union Station to Burlington Station (205 km of electrified track) • Use of electric rolling stock (locomotives and EMUs)

APPENDIX H.2

Excerpts – Region of Halton Transportation Master Plan

The **Road** to *Change*

Halton Region Transportation Master Plan

2031

Halton REGION

September 2011

TDM initiatives do not on their own address the forecasted travel demand to 2031 but these should be considered an element of the overall transportation solution to ensure the efficient movement of people and to encourage the use of alternative modes of travel while minimizing impacts on socio-economic and natural environments.

5.5 Active Transportation

Active Transportation refers primarily to walking and cycling. Active Transportation can provide health benefits to individuals by increasing physical activity and can benefit the environment by conserving energy and reducing emissions that impact air quality.

The attractiveness of walking and cycling is influenced by:

- The distance between origin and destination;
- Individual attitudes towards walking and cycling;
- The availability of pedestrian and cycle facilities that are:
    - Maintained year round;
    - Direct and continuous; and
    - Physically safe with respect to pedestrian/cyclist interaction with other pedestrians/cyclists as well as interaction with vehicles; and
- Suitable facilities such as benches, water fountains, bicycle parking/storage, personal showers and change rooms at a destination.

According to the 2006 Transportation Tomorrow Survey, approximately 34 percent of current "auto drive" trips during the PM peak period are short trips under 5 km in length, with a further 30 percent of trips falling in the 5-10 km and 10-15 km trip length range. These represent the target market for shifts to Active Transportation modes as longer trips do not become reasonable or feasible for "average" travellers.

The success of Active Transportation depends on the ability to attract those individuals that are driving their car (as a single occupant) to a destination which is within 5 to 10 km.

Table 5.2 summarises the distribution of trip length for auto driver trips made by Halton residents in 2006 (according to the 2006 Transportation Tomorrow Survey).

Previously, the Region coordinated cycling through the former Halton Regional Cycling Advisory Committee. A broader focus is required to account for the other Active Transportation modes including walking, roller blades and scooters. In December 2010 Regional Council dissolved the Regional Cycling Committee and approved the establishment of a new Regional Active Transportation Advisory Committee. The Region's "Active Transportation Advisory Committee" (ATAC) will define a coordinated approach to all non-motorised travel needs across the Region. The ATAC will play an active role in establishing a strategy defining educational and outreach initiatives and infrastructure improvements to promote increased non-motorised travel throughout the Region.

7.3 Public Transit

The evaluation of transportation demand in the Region to 2031 determined that in order to maintain current levels of service and establish a transportation system that recognises the vision and guiding principles established through ROPA 38 and this TMP, 15 to 20 percent of all peak period trips must be accommodated by public transit by 2031. Meeting this objective will, however, require a significant enhancement of transit services over the planning period, a stronger commitment to transit-supportive development and policies, the implementation of a transit supportive road network and implementation of transit improvements by neighbouring municipalities and Metrolinx in accordance with the Metrolinx Regional Transportation Plan (The Big Move).

To ensure that the proposed Regional road network effectively accommodates the transit services required to achieve the 2031 transportation system objectives, a conceptual Transit Strategy was developed with the local municipal transit authorities to ensure transit supportive initiatives within the Regional roadway network are provided to accommodate:

- Implementation of a Bus Rapid Transit (BRT) service along Dundas Street and Trafalgar Road;
- Protection for higher order transit corridors within key areas of Halton Region; and
- Development of a Transit Priority Program and implement measures along key corridors and nodes.

The TMP analysis considered a gradual transit increase over the next 20 years as presented in **Table 7.1.**

Table 7.1 - Transit Mode Share Targets by Horizon

Horizon Year	Transit Mode Share Target		
	Internal Trips	External Trips	Total
2016	2%	7%	5%
2021	6%	20%	10%
2026	8%	30%	15%
2031	11%	30%	20%

A transit servicing concept was developed to demonstrate the feasibility of achieving a 20 percent transit mode share by 2031. This concept evolved from discussions with the Municipal Advisory Group and is an initial step in addressing the anticipated travel needs of the Region and its local municipalities. Further discussion among these stakeholders will be required to define transit servicing to 2031.

Higher order transit corridors were identified within Halton Region to increase transit service usage and help meet the region-wide Transit Mode Split targets. Three types of corridors were considered, each providing a different level of transit service:

- Transit in reserved rights-of-way;
- Transit in semi-exclusive/exclusive rights-of-way; and
- Corridors with transit priority.

Transit in reserved rights-of-way - This is the highest level of priority for transit. In this corridor type, transit vehicles operate in an exclusive travel lane unimpeded by traffic (with the exception of intersection crossings). Transit signal priority features are also placed at signalised intersections to give transit vehicles priority and improve the reliability of service. An example of this type of corridor is the proposed Dundas Bus Rapid Transit corridor.

Transit in semi-exclusive/exclusive rights-of-way – This is the second highest level of priority for transit. In this corridor type, buses operate in high occupancy vehicle lanes; shared with taxis and automobiles with 2+ or 3+ occupants. Transit signal priority measures are placed at signalised intersections (where warranted). An example of this corridor type includes Eglinton Avenue East in Toronto.

Corridors with transit priority – This is the third highest level of priority for transit. In this corridor type, buses operate in mixed traffic lanes. Transit priority features such as signal priority and queue jump lanes are implemented at specific intersections along the corridor to improve service reliability and decrease travel time. An example of this is the first phase of the Züm higher order transit service on Queen Street in Brampton.

The transit servicing concept is presented in **Figure 7.1**.

7.3.1 External Transit Demand

The external transit demand will largely be met by planned improvements in the GO Transit network (rail and bus). Halton Region has also initiated a number of studies with the objective of improving local and inter-regional transit access such as the Dundas BRT Study in partnership with Oakville and Burlington, as well as the Trafalgar Road BRT Study.

Notes:
i. Based on existing and previously proposed routes from the Town of Oakville Active Transportation Master Plan (2009), the North Oakville Trails Plan (2013), Downtown Transportation and Streetscape Study (2015), Midtown Oakville Transportation and Stormwater Municipal Class EA Final Report (2014). Includes existing routes from the Halton Region Active Transportation Master Plan (2015).
ii. Signed Routes may include sharrow or edgeline markings.
iii. Refer to Technical Appendix K for proposed routes from the Halton Region Active Transportation Master Plan (2015).
iv. Parks and Natural Heritage System includes the Parkway Belt.

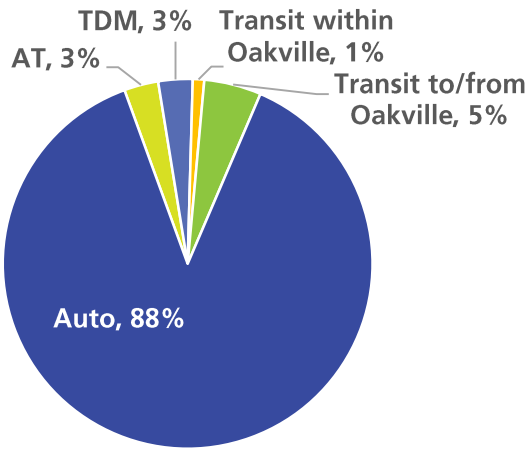
4 Transit Split Target Assessment

4.1 Alternative Transit Mode Split Scenarios

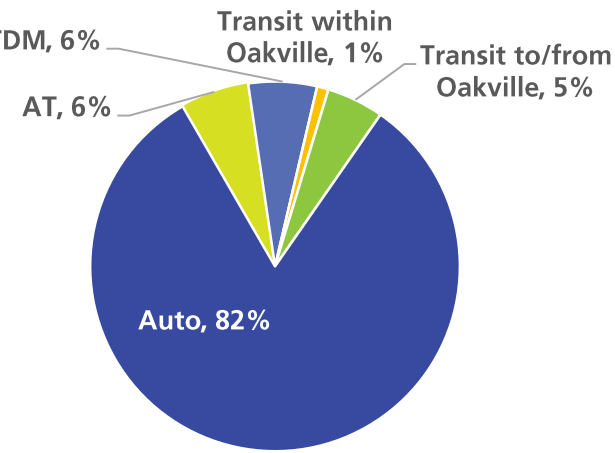
In addition to the baseline condition, five alternate transit mode split scenarios were developed and assessed to determine the optimal conditions for the year 2031. With the recent ATMP Update and TDM initiatives, the town will continue to encourage these modes of non-auto trips. All scenarios assume that the active transportation and TDM targets of 6% each as set out in *Switching Gears 2013* will be met by 2031. The scenarios are described below:

- **Scenario A: Growth in AT and TDM,** assumes the percentage of trips by local and inter-regional transit remains unchanged at the current level of 1% and 5%. There will be some growth in the number of transit trips due to an overall increase in trips taken by all mode.
- **Scenario B: Growth in AT and TDM and Local Transit,** assumes growth in local transit mode share based on an extrapolation of the growth rate to 2031 in the 2015 Transit Service Review Report, resulting in a 2031 PM peak period local transit mode share of 3%. There will be no increase in inter-regional transit mode share.
- **Scenario C: Growth in AT and TDM, higher growth in inter-regional transit,** assumes that no growth in local transit mode share but service improvements anticipated through Metrolinx's Regional Transportation Plan initiative will be in place and also higher transit mode share for other municipalities in Halton Region, which results in inter-regional transit share of 7%.
- **Scenario D: Growth in AT and TDM, local transit and higher growth in inter-regional transit,** assumes a 3% local transit split as outlined in Scenario B and a higher inter-regional transit share of 9%, for a total transit mode share of 12%.
- **Scenario E: Growth in AT and TDM and higher growth in local transit and inter-regional transit,** assumes high growth in both local and inter-regional transit through high investments in transit infrastructure projects for a transit mode share of 16%.

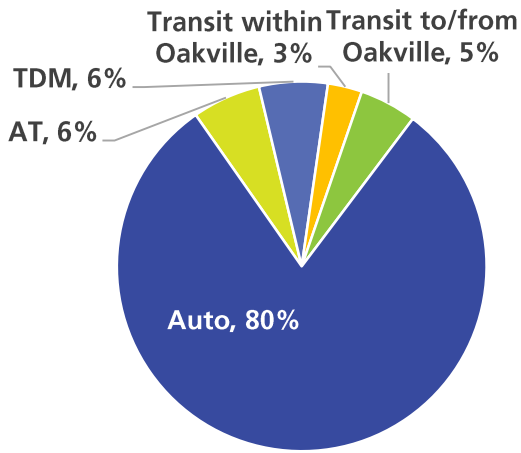
Figure 19 summarizes the transit mode split targets for 2031 under each scenario considered.



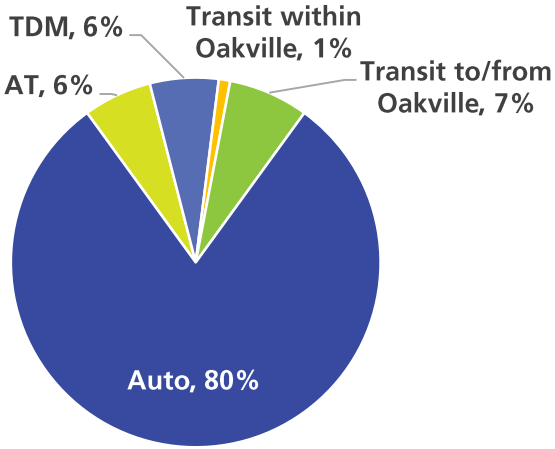
Baseline Scenario
Existing trend



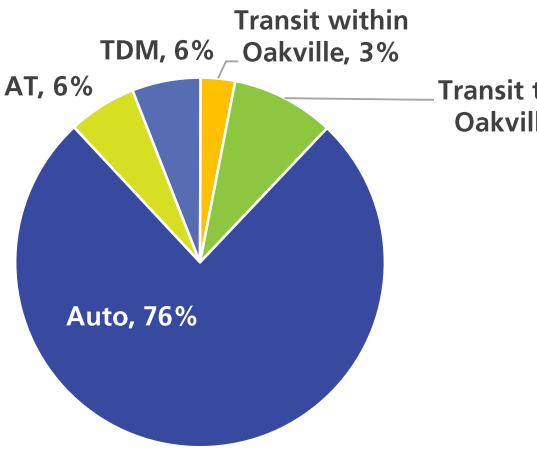
Scenario A: Growth in AT and TDM



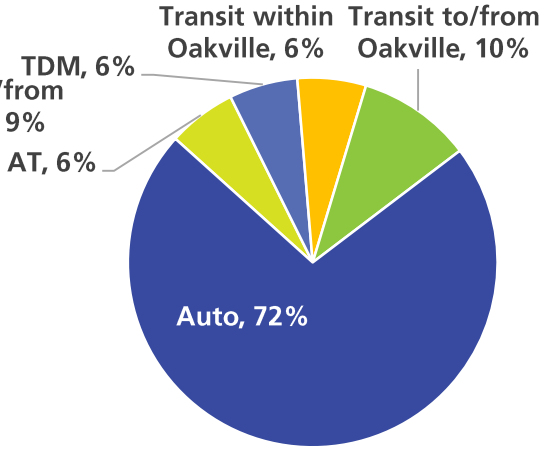
Scenario B: Growth in AT, TDM and local transit



Scenario C: Growth in AT and TDM, Higher growth in inter-regional transit



Scenario D: Growth in AT, TDM and local transit, Higher growth in inter-regional transit



Scenario E: Growth in AT and TDM, Higher growth in local and inter-regional transit

Figure 19: Alternative Transit Mode Split Scenarios for 2031

4.3 Preferred Transit Mode Share Target

From the assessment and evaluation of the socio-economic environment, natural environment, transportation services and traffic impacts, and cost-effectiveness perspectives, it is noted that Scenario D prevails as the preferred interim solution for 2031 with growth in AT and TDM, local transit, and higher growth in inter-regional transit. The 20% transit mode share is still the town's ultimate goal in order to provide sustainable transportation options. With the proposed interim transit mode share in Scenario D, the number of capacity-constrained screenlines is reduced from seven to four in the 2031 baseline scenario with trend modal share presented in **Figure 19**.

The remaining screenline lane deficiencies are presented in **Figure 20** and **Table 10**. Comparing to the baseline scenario, the screenlines east of Sixth Line and Trafalgar Road are no longer approaching capacity. In addition, the screenline along Oakville Creek South was previously identified as requiring two additional lanes per direction. Under the preferred scenario, only one additional lane per direction is required.

APPENDIX K

Signal Warrants

Input Data Sheet

Analysis Sheet | Results Sheet | Proposed Collision

GO TO Justification:

What are the intersecting roadways? South Service Road East and Davis Road

What is the direction of the Main Road street? North-South

When was the data collected? 2030 Future Total Traffic

Justification 1 - 4: Volume Warrants

a.- Number of lanes on the Main Road? 2 or more

b.- Number of lanes on the Minor Road? 1

c.- How many approaches? 4

d.- What is the operating environment? Urban Population >= 10,000 AND Speed < 70 km/hr

e.- What is the eight hour vehicle volume at the intersection? (Please fill in table below)

Hour Ending	Main Northbound Approach			Minor Eastbound Approach			Main Southbound Approach			Minor Westbound Approach			Pedestrians Crossing Main Road
	LT	TH	RT	LT	TH	RT	LT	TH	RT	LT	TH	RT	
7:00	0	81	29	1	0	1	4	97	1	32	0	3	0
8:00	0	81	29	1	0	1	4	97	1	32	0	3	0
9:00	0	81	29	1	0	1	4	97	1	32	0	3	0

13:00	0	81	29	1	0	1	4	97	1	32	0	3	0
16:00	0	81	29	1	0	1	4	97	1	32	0	3	0
17:00	0	81	29	1	0	1	4	97	1	32	0	3	0
18:00	0	81	29	1	0	1	4	97	1	32	0	3	0
Total	**0**	**648**	**232**	**8**	**0**	**8**	**32**	**776**	**8**	**256**	**0**	**24**	**0**

Justification 5: Collision Experience

Preceding Months	Number of Collisions*
1-12	0
13-24	0
25-36	0

* Include only collisions that are susceptable to correction through the installation of traffic signal control

Justification 6: Pedestrian Volume

a.- Please fill in table below summarizing total pedestrians crossing major roadway at the intersection or in proximity to the intersection (zones). Please reference Section 4.8 of the Manual for further explanation and graphical representation.

	Zone 1		Zone 2		Zone 3 (if needed)		Zone 4 (if needed)		Total
	Assisted	Unassisted	Assisted	Unassisted	Assisted	Unassisted	Assisted	Unassisted	
Total 8 hour pedestrian volume									
Factored 8 hour pedestrian volume	0		0		0		0		
% Assigned to crossing rate	23%		34%		30%		100%		
Net 8 Hour Pedestrian Volume at Crossing									0
Net 8 Hour Vehicular Volume on Street Being Crossed									2,000

b.- Please fill in table below summarizing delay to pedestrians crossing major roadway at the intersection or in proximity to the intersection (zones). Please reference Section 4.8 of the Manual for further explanation and graphical representation.

	Zone 1		Zone 2		Zone 3 (if needed)		Zone 4 (if needed)		Total
	Assisted	Unassisted	Assisted	Unassisted	Assisted	Unassisted	Assisted	Unassisted	
Total 8 hour pedestrian volume	0	0	0	0	0	0	0	0	
Total 8 hour pedestrians delayed greater than 10 seconds	0	0	0	0	0	0	0	0	
Factored volume of total pedestrians	0		0		0		0		
Factored volume of delayed pedestrians	0		0		0		0		
% Assigned to Crossing Rate	23%		34%		30%		100%		
Net 8 Hour Volume of Total Pedestrians									0
Net 8 Hour Volume of Delayed Pedestrians									0

Input Data Sheet

Analysis Sheet | Results Sheet | Proposed Collision

GO TO Justification:

What are the intersecting roadways? South Service Road East and Davis Road / QEW EB off-ramp

What is the direction of the Main Road street? North-South

When was the data collected? 2035 Future Total Traffic

Justification 1 - 4: Volume Warrants

a.- Number of lanes on the Main Road? 2 or more

b.- Number of lanes on the Minor Road? 1

c.- How many approaches? 4

d.- What is the operating environment? Urban Population >= 10,000 AND Speed < 70 km/hr

e.- What is the eight hour vehicle volume at the intersection? (Please fill in table below)

Hour Ending	Main Northbound Approach			Minor Eastbound Approach			Main Southbound Approach			Minor Westbound Approach			Pedestrians Crossing Main Road
	LT	TH	RT	LT	TH	RT	LT	TH	RT	LT	TH	RT	
7:00	0	81	24	86	5	63	4	97	0	32	0	3	0
